IMPORTANT

On page 119 of this edition the publisher has provided a set of self-addressed post cards to enable recipients to find information they require that may have been omitted from this edition.

THIS ADDITIONAL SERVICE IS NOT AVAILABLE UNTIL THE RECIPIENT HAS RETURNED THIS ACKNOWLEDGEMENT FORM

QUESTIONNAIRE

1. Do you find the Architectural and Building Catalogue useful? Yes No
   (a) Are you guided quickly to needed items? Yes No
   (b) Are these items adequately described? Yes No

2. Do you prefer the specification sheet advertising pages as appear to General type advertising? Yes No

3. Do you need the 1960-61 edition of the Engineering and Industrial Catalogue? Yes No

4. Do you wish to comment further on the assistance this catalogue gives you? Yes No

GUILD PUBLICATIONS LIMITED
320 Gerrard St. East, Toronto, Ont.
THIS issue of The Architectural and Building Catalogue contains a very substantial amount of new reference data of interest to those engaged in the design, construction and equipping of buildings for residential, commercial and industrial purposes.

Originally established in 1909 as “Specification Data” and subsequently incorporated as the “Building Materials and Equipment Section” of “The Engineering Catalogue” this publication has served the Architects, Building Contractors, and related organizations continuously for the past 40 years.

The primary purpose of a catalogue of this nature is to provide, within a single volume, information which will give a list of available sources of supply of the various materials and equipment used in the construction and building industries, and at the same time furnish such data regarding these products as will assist the designer and purchaser in determining those best suited to his requirements.

Actually the “Catalogue” is a self-contained “filing system” wherein manufacturers may “file” their individual catalogue data with the assurance that it will be thoroughly indexed, permanently bound, and placed in the offices of important users throughout Canada. The extent to which informative data, specifications, and illustrations are included in the manufacturers’ pages depends entirely upon the manufacturers themselves, but it is obvious that the more detailed products data that a manufacturer makes available throughout the following pages to prospective users of his products, the more valuable this, and succeeding editions will be to the architectural profession and construction industry.

The extent of the services rendered by the Catalogue depends to a considerable degree upon the amount and character of the products information it contains and the publishers gratefully acknowledge the co-operation of the many organizations which have contributed to the present volume through the careful preparation of the data relating to their products appearing on the following pages.

This year all subscribers to this edition as well as subscribers to the Engineering and Industrial Catalogue will have included with their subscription a Bi-Monthly edition of New Equipment Review.

Our objective in publishing N.E.R. is to assist Architectural, Engineering and Construction Equipment specifiers in keeping abreast of equipment or suppliers that may come on the market between the publishing dates of either catalogue.

Every attempt will be made by the Publishers to cross-reference each item similar to the cross-reference appearing within both the product and manufacturers indexes of this issue.

The plan adopted in compiling the Catalogue is designed to offer the most convenient arrangement to serve the requirements of the Canadian purchaser.

Five principal divisions are provided —

The first, or Catalogue Data, contains descriptive information, provided by manufacturers or their representatives, regarding a wide variety of products, arranged according to standard catalogue practice.

The second, or Directory, is an alphabetically arranged list of building material manufacturers and representatives with complete addresses and location of branch offices.

In the third, or Products Index, the various building materials are listed alphabetically with the names of the suppliers in each case.

The fourth, or Directory, is an alphabetically arranged list of construction equipment manufacturers and representatives with complete addresses and branch office locations.

In the fifth, or Products Index, the various types of construction equipment are listed alphabetically with the names of suppliers in each case.

Consult the Products Index under the heading for the product in question where the names of firms reported as manufacturers of the product will be found.

Turn to the Directory where the names of manufacturers are listed alphabetically with the addresses of their various offices, together with the names of their sales representatives. In this section are listed also the names and addresses of organizations throughout Canada acting as sales representatives for the manufacturers listed throughout the Products Index.

The data contained in the Products Index and the Directory have been compiled from information received in reply to a questionnaire sent to firms throughout Canada, the United Kingdom, and the United States, and supplemented by data on the publisher’s files.

Guild Publications Limited maintains extensive files of information relative to Manufacturers and their products, and will be pleased to furnish information concerning Names, Addresses, Products, Trade Names, etc., upon request. This service is available free of charge to all users of the Catalogue. (See self-addressed post cards on page 119.)

The compilation of indices of this nature is a complex task and in consequence, omissions may occur and changes may take place between compilation and publication dates. In order that this catalogue may prove of maximum value to those who refer to it, the publisher will welcome suggestions in regard to additions or changes to the Directory, which may be sent to the Indices Dept., The Architectural and Building Catalogue, 320 Gerrard Street East, Toronto, Canada.
AGA
AGA STEEL RADIATORS

AGA Steel radiators have been manufactured (in Sweden) since 1920 and in Canada since 1951. The many advantages with the Steel radiators explain their world-wide acceptance. "AGA" manufactures steel radiators in many countries, and the growth of sales and acceptance of our products has been most encouraging.

The many advantages with the Steel radiators explain their worldwide acceptance. "AGA" manufactures steel radiators in many countries, and the growth of sales and acceptance of our products has been most encouraging.

THE AGA RADIANT BASEBOARD
Made in (Element) lengths of 2' to 16' inclusive. End enclosures have arrangement for slight variation in length. This very popular style of radiator has a heat output of 5 square foot E.D.R. per lineal foot. Rapid installation cuts labour cost.

THE AGA STANDARD STEEL RAD
This radiator type is available in practically any size required. Most practical for hospitals and other institutions where sanitary, easily cleaned installations are a must. Sturdy and economical.

PLANELLO-CON-RAD TYPE
This elegant radiator is especially suitable for high class apartments and commercial installations. Available in various heights, thicknesses and lengths. Floor or wall mounted.

CONTINUOUS WALL INSTALLATION WITH "PLANELLO" TYPE STEEL RADS
This type is used and recommended for commercial installations, such as schools, churches, offices and others.

Informative catalogues and price lists available from
AGA STEEL RADIATORS OF CANADA LTD.
AJAX, Ontario Phone AJAX 135 Toronto — EM. 8-5185
AGA Radiators are available from any heating and plumbing wholesaler in Canada.
CALCITUM CHLORIDE IN CONCRETE CONSTRUCTION

SETS CONCRETE IN LESS THAN HALF THE NORMAL TIME

By using Calcium Chloride integrally in concrete, the setting of portland cement is cut to less than half the normal time. Not only is the setting time greatly shortened, but the rate of hardening is increased at very early periods, producing sufficient stiffness for finishing in less than half the usual time. It is these two features of speed and strength that permit early finishing and removal of forms and results in elimination of overtime with days and weeks saved in construction. The ultimate strength of the concrete is also substantially increased.

HOW DOES CALCIUM CHLORIDE AFFECT CONCRETE?

The addition of small quantities of calcium chloride to cement mortars accelerates the setting and increases the workability of the mix. The action appears to be due to an increased rate of emission of the heat of hydration of several of the compounds present in the cement.

The setting of concrete is affected very greatly by temperature, more so than some engineers realize. The accompanying chart was prepared to show the length of time required for standard and high early strength cements, both with and without calcium chloride to reach a strength of 2500 lb. per sq. in. at placing and curing temperatures of 40, 70 and 90 degrees F. It will be noted that setting times of untreated cements varied from 4 days at 90 deg. F. to 14 days at 40 deg. F., also that the addition of calcium chloride reduced these times to two days at 90 deg. F. and about seven days at 40 deg. Similar acceleration was shown when used with high early strength cements. The action of calcium chloride was to decrease setting time by half with both cements at any temperature.

CALCIUM CHLORIDE was used in the construction of Ecole Polytechnique of Montreal.

CONTRACTORS: QUEMONT CONSTRUCTION INC.
CONCRETE DESIGN BY LALONDE & VALDIE, CONSULTING ENGINEERS
ARCHITECT: GAETAN GAGNÉ

QUANTITY OF CALCIUM CHLORIDE REQUIRED

In general, the addition of 2 lbs. Calcium Chloride by weight of Portland cement is recommended for normal temperatures (80°F to 32°F). This quantity can be varied from 1 lb. per bag of cement for use when the temperature is above 90°F to as much as 4 lbs. per bag of cement during lower ranges of temperature. The use of quantities in excess of 4 lbs. is not recommended at any time.

HOW APPLIED

Calcium Chloride may be added to the mix in two ways, either by the direct addition of the Dry Flakes to the mix, or by dissolving the flakes in water and adding the solution to the mix. Both methods are fully approved by the American Society for Testing Materials, as outlined in A.S.T.M. Designation C-82-38.

THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
For Highest Owner Appeal

Specify

ALSCO

OFFERS THE BUILDER

• Savings on installation costs and time. ALSCO windows arrive on the job ready to install, glazed and weather-stripped, with all necessary hardware.
• No painting required—ALSCO design and aluminum finish blend with all architectural styles and colours.
• Strong, lightweight construction lowers shipping and handling costs.
• Versatility—windows can be arranged in an interesting variety of combinations.
• Distributors and service across Canada.

ALSCO

OFFERS THE OWNER

• No maintenance costs.
• Savings on heating costs owing to precision construction.
• Rain-proof security.
• Never "painted shut".
• No adjustments or refitting costs.
• Prestige.

CANADA BRICK LIMITED • Streetsville, Ontario, ATwater 9-2794
CURTIS LIGHTING OF CANADA LIMITED
195 WICKSTEAD AVE., LEASIDE, TORONTO 17, ONT.

CURTIS FLUORESCENT LIGHTING

CURTIS "EYE-COMFORT" LUMINAIRES

Curtis "Eye-Comfort" luminaires and troffers are designed to provide excellent general illumination for schools, stores, offices and other commercial and industrial interiors.

The "Edge-Glo" is a 48" long thin luminaire with side panels softly illuminated by reflected light to give a new modern ceiling construction a startling effect. Bottom enclosures may be plastic egg-crate louver, dished diffuser, honeycomb panel or plastic lens.

The "Sabre" presents sweeping lines of tomorrow's styling combined with excellent brightness control. It is a completely shielded semi-direct luminaire. This is achieved through the use of an unusual one-piece wrap around prismatic reflector of crystal clear plastic.

The low brightness of the "4060" blends with the illuminated ceiling making it possible to attain high levels of illumination without annoying glare. There are many types of "Curtis Troffers" designed to eliminate glare and with various degrees of lamp shielding. Troffers are designed to take plastic or metal louvers, plastic panels, glass panels, honeycomb and lenses.

CURTIS INCANDESCENT LIGHTING

CURTIS RECESSED LIGHTING

Square and Round recessed units are constructed for all sizes of incandescent lamps and to take glass lenses, honeycomb panels, louvers and wire guards. These units can be with ceiling flange only for re-lamping from above ceiling or with hinged door for re-lamping from below.

Units can be supplied in either a metal housing or unhoused. Housed units are required where ceiling is not of fireproof construction. Unhoused units may be used on fireproof construction only.

Round housed downlights Punchy, "Vari-Spot" and "Spotty" have a flange fastening device designed to hold ceiling flange to the recessed fixture through an internal ratchet mechanism. No screws, nuts or hinges are used.

Write for full details

CURTIS-MILLER Fluorescent and Incandescent lighting units for every commercial and industrial application, and also CURTIS-REVERE quality floodlights for outdoor lighting of buildings, sports fields, service stations, airports and street lighting. THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
another first from the first name in electric heat...

CHROMALOX ALL-ELECTRIC UNIT
for Heating, Ventilating and Natural Cooling

This new and versatile Electric Unit is specifically engineered for fast response to the unusual thermal requirements of classrooms, as well as auditoriums, gymnasiums, cafeterias and libraries of schools. It is part of a line of famous products for heating modern schools with the modern fuel—electricity—and for ventilating and cooling with controlled outdoor air intake.

The Chromalox Electric Unit is available with integral room thermostat, damper controls, and step controls to modulate heat output. Pneumatic or electronic control systems can be factory- or field-installed.

This All-Electric Unit leads the way to impressive savings in financing and construction. Only a few wires connect it. No need for boiler rooms, boilers, piping, valves or chimneys. And maintenance costs, too, are considerably less than with conventional systems.

Chromalox Electric Baseboards go hand-in-hand with these new All-Electric Units to maintain reduced night temperatures and to eliminate objectionable window downdrafts.

Chromalox All-Electric Units carry real quality features such as direct-motor drive, and heat generated at the point of use by Chromalox metal sheath elements, operating on the draw-through principle. Air capacities from 500 to 1250 CFM: heating capacities from 2700 to 61,500 BTU/HR. For further information write for "Heating Schools Electrically" and Bulletin 980B.

Chromalox Units are normally installed below window sills. They are particularly suited to modernization or expansion of existing school buildings.

... adding a broader scope for more distinctive and flexible designs... interior and exterior.
CAREY ROOFING

You can count on Carey Bonded Roofs and Carey Asphalt Shingles and Roll Roofing for long lasting quality and repair free service. The Carey Specifications Manual contains vital information—over 80 detailed pages on how to specify and erect dependable built-up roofs. Carey Shingle Folder is in full colour and graphically illustrates the colours and specifications. They are available on request to engineers, architects, contractors and applicators.

The Carey “roof check inspection report” offers free survey service of the property to be re-roofed and gives data on the condition of flashings, parapet walls, gutters, etc.

MIAMI-CAREY

Quality bathroom cabinets, kitchen fans and accessories for every installation in homes, offices and commercial buildings. A complete illustrated catalogue is available on request or special units can be built to your requirements.

INDUSTRIAL INSULATION

Whatever your insulating problem may be Carey experts will specify the particular type of insulation most suitable for your purpose. Over 80 years' experience in this field assures you of top quality material and workmanship. Carey manufacture flat and curved blocks and pipe coverings for any surface with temperatures from sub-zero to 1900 degrees. Standard size blocks are furnished size 6” x 36” with thicknesses 1” to 3½”, pipe coverings in 36” lengths with canvas jackets and metal pans—other sizes are available. Write for complete illustrated catalogue.

CAREY ELASTITE PRODUCTS

Asphalt Expansion Joint protects against cracking, crushing or buckling of cement due to temperature changes.

Asphalt Bridge Plank withstands heavy traffic on bridges and loading platform. Does not warp, swell, split or decay. Write for manual explaining easy, inexpensive applications in concrete and masonry construction.

THE ARCHITECTURAL AND BUILDING CATALOGUE—1959
THE LEADERSHIP LINE... Unmatched in Variety... Unequaled for Installation Experience!

CAVITY** TILE. Installed on Celotex T&T® Suspension System, unique design utilizes air space above ceiling to dissipate noise. Rigid, incombustible, ¾" thick perforated tile, 2' x 2' size, square edge. Washable white finish, paintable repeatedly without loss of balanced acoustical efficiency.

ACOUSTEEL® METAL PAN ASSEMBLY. Steel or aluminum facing; wire grid; mineral wool pad; snap-in T-bar supports. Random† shown Standard or Diagonal perforations. White baked-on finish or (aluminum) mill or satin finish. Washable. Paintable. 12 x 24 and 12 x 36 sizes.

STELLAUSTRIC® PANELS. Steel facing has linear or random-louvered facing; sound-absorbing element laminated to back. Incombustible. 2' x 2' and 2' x 4' sizes. Low-cost installation on Celotex T&T Suspension System. White or (shown) Stria-color baked on finish. Washable. Paintable.

CAN FIBER TILE. Lightweight, durable, highly sound-absorbing. Wash or paint repeatedly without acoustical loss. Standard or (shown) Random perforation. ¾", ¾" and 1" thick; 12 x 12, 12 x 24, 12 x 36, 12 x 48 size. White.

SPATTER FINISH CAN FIBER TILE. Random pattern, finished in white with brown or green spatter. Very decorative. Available with beveled butt joint, 12 x 12 size, ½" thick. Washable, paintable without loss.

ACOUSTI-LINE® EXPOSED SUSPENSION SYSTEM. Dead-level support for acoustical tile, light fixtures, air diffusers. All parts can be rearranged to meet space changes. Quick, easy access to above-ceiling areas. 3", 4" and 6" widths.

ACOUSTIC® EXPOSED SUSPENSION SYSTEM. Uninterrupted ceiling plane with no exposed metal parts. Non-breathing at all joints, so surface stays cleaner.

INCINERATORS
FOR EVERY PURPOSE

CAPACITIES:
20 pounds per hour to 200 tons per day

DECARIE INCINERATORS are built in all types and sizes and may be installed in any building ranging from the smallest bungalow to the largest office building or hospital. All DECARIE INCINERATORS are ruggedly built, neatly designed without any complicated parts to catch the dirt and offend the eye. Each incinerator is backed by years of practical incinerator building and designing. DECARIE INCINERATORS may be installed right in the kitchen or wards where the refuse is created or may be installed in the basement with a chute leading to it from the different floors. This arrangement prevents the accumulation of garbage and does away with the unsightly garbage can.

Another factor to be considered in disposing of refuse is the system used. There are many so-called incinerators, some of which are really garbage burners while others are simply a collection of bricks and castings. The DECARIE SYSTEM of INCINERATION is a guaranteed garbage burning system.

The main feature of the DECARIE INCINERATOR is the SUSPENDED GRATE. By means of this exclusive DECARIE feature, the fire set on the shaking grate continuously burns without danger of smothering; and the refuse placed in the SUSPENDED GRATE is entirely consumed. Full details of this system of incineration gladly sent upon request.

Many standard models are available in various sizes to suit practically every requirement, large or small; and special units will be designed and built to meet all requirements.

WHERE DECARIE INCINERATORS ARE USED

In apartments and residences to consume refuse from kitchens.
In hospitals to consume refuse from kitchens, wards and operating rooms.
In institutions to consume miscellaneous refuse created daily.
In departmental stores to consume material from cafeterias, waste paper, old boxes.
In banks to consume waste paper, cafeteria refuse and miscellaneous rubbish.
We have a specially designed incinerator for destroying old bank notes and cancelled documents.
In restaurants for consuming kitchen waste.

LEADING THE FIELD FROM COAST TO COAST...

LIVING Colors OF TOMORROW IN VINYL TILE...

Robbins FLOOR PRODUCTS, INC.
Tuscumbia, Alabama

fabulous floors by

REALTORS OF AMERICA'S MOST BEAUTIFUL AND UNUSUAL FLOORS
Robbins Vin

YELLOWS

for rhythm

ARCHITECT: EDWIN T. REEDER ASSOCIATES, A.I.A.
COLORS CREATED FOR LIVING — perfectly co-ordinated to give you the perfect floor! This is the ultimate purpose of the master men of Robbins. Here in this folder you will find all beauty, correctness and warmth of design you desire. Colors presented here have been selected and precisely blended by a group of the country’s greatest color experts. These are the colors you will be living with... it’s true... in your clothing, your cars, your appliances, furniture and other home furnishings... in the living, color-dramatic world of tomorrow.

Robbins vinyl tile flooring has become the accepted standard of quality and styling in the recent flooring industry. It is only logical that you should be able to look to Robbins for the very ultimate in color-harmony, as well.

Robbins research, development and color exploration will continue... matching steps with every other producer of the colorful things you live with... to help you create your background of modern living!

**ROBBINS FLOOR CLEANER and DRESSING**

Beautiful floors require quality care. Robbins vinyl tile floors may be effectively cleaned and attractively maintained with any number of top quality cleaners and dressings. However, we justifiably recommend these two Robbins-tested and perfected products... specifically made for Robbins Vinyl... for the very finest results.

### ROBBINETTE

**ALL NEW Plastic-fortified FLOOR TILE**

Lightful, modern color shades in a budget-priced resilient tile flooring. Long life and ease of upkeep make ROBBINETTE an ideal... and economical choice for residential and light commercial installations. **Standard thickness:** 3/16". **Standard size:** 9" x 9".

17 sparkling colors!

### ROBBINS CORK TILE

Made of the very finest raw cork, compressed to high density. Beautiful, mellow tones. Naturally tough, and made for long servility. Available with either bevelled or square edges. Waxed polished at factory. **Standard thicknesses:** 3/16" and 5/32" (1/4", and 1/2" available on special order). **Standard sizes:** 6" x 12", 9", 12" x 12" tiles.
**ROBBINS GEOMETILE**

Here is truly one of the most versatile of vinyl tiles for modern, colorful floor design. Geometile comes in the complete range of Reds, Blues, Achromatics, Yellows, Oranges and Greens, plus a complete range in beautiful Metaltones. Diamonds are available in Solid, Terra-Tile and Metaltone. Octagons and Hexagons are available in Solid, Marbleized, Terra-Tile and Metaltone. Standard thickness: \( \frac{1}{8}" \). Standard sizes: Regular Diamonds, 12" long with 60° angle; Slim Diamonds, 12" and 18" long with 45° angle; Octagons and Hexagons, 12° wide.

---

**ROBBINS CHIPSTONE and BRICKETTE**

Realistic, casual and delightful ... designed to express comfort, informality and individuality. These new style developments in resilient vinyl tile are certainly refreshing and very versatile in their use suggestions ... for dens, family rooms, kitchens, sun rooms, and other rooms where scatter rugs are a part of the decorative scheme. Chipstone is available in a light and darker tone as illustrated. Brickette is available in the standard brick design as shown. Standard thickness: \( \frac{1}{8}" \). Standard size: 9" x 9".

---

**ROBBINS POLKATILE**

Wonderfully original ... a fresh new design in modern floor styling. It is aptly named, Polkatile ... combining the beauty and texture of solid pastel shades with the lively look of many-colored polka dots of contrasting shades to produce a delightfully whimsical and different floor idea. It’s solid — colors and pattern go all the way through.

Standard size: 12" x 12".
Standard thickness: \( \frac{1}{8}" \).
A. W. ALGRIP
World's Only Abrasive Rolled Steel Floor Plate

A. W. ALGRIP is the only abrasive rolled steel floor plate in the world. No other floor plate combines rolled steel and abrasive grain to give you super protection against slipping accidents.

Developed and patented by Alan Wood Steel Company, ALGRIP features tough abrasive grain—the same type used in grinding wheels—rolled as an integral part of the upper portion of steel floor plate. Result: A rugged, durable floor plate that's truly non-slip—even when wet—even on steep inclines!

Because ALGRIP is rolled steel, it is stronger than other abrasive flooring. This means that thinner, lighter sections may be used without risking breakage or cracking—and without sacrificing load-carrying capacity. And because wear only exposes more of the abrasive particles, ALGRIP lasts for the life of the building—without maintenance.

NON-SLIP...

EVEN ON STEEP INCLINES

A. W. SUPER-DIAMOND
ROLLED STEEL FLOOR PLATE

GRIPS WITHOUT A SLIP!
EASY TO CLEAN!
EASY TO MATCH!

Put a stop to costly slipping accidents inexpensively—with A. W. SUPER-DIAMOND Rolled Steel Floor Plate Engineered for complete safety from any angle, A. W. SUPER-DIAMOND gives permanent, non-skid protection against slipping hazards. There are 40 non-slip traction points in every footprint. Exclusive Super-Diamond Pattern makes plates easy to match without waste. It can be cut and installed overnight.

SUPER-DIAMOND Floor Plate cleans easily with hose, brush or mop. It drains and dries rapidly and requires no maintenance.

First cost is the last cost with A. W. SUPER-DIAMOND. And because this rugged floor plate lasts a lifetime, prorated expense is very low. No maintenance is needed because heavy traffic and hard use will not harm SUPER-DIAMOND. On entire floors and small areas as well, it offers an unusual combination of advantages.

EVERYTHING IN PLUMBING DRAINAGE PRODUCTS

ROOF DRAINS, FLOOR DRAINS, BACKWATER VALVES, INTERCEPTORS for Grease, Oil, Sediment, SHOCK ABSORBERS, CARRIERS and CLOSET FITTINGS for wall-hung fixtures, SWIMMING POOL FITTINGS, DRAINAGE SPECIALTIES

Illustrated on these 2 pages are only a few of the many hundreds of plumbing drainage products in the Josam line. In this extensive line is a product for every plumbing drainage requirement...application...location. For further information write for complete Josam catalogue or contact the Josam Engineering Department at Toronto, or call the Josam representative in your territory.

SERIES "JH" GREASE INTERCEPTOR

automatically draws off grease at the turn of a valve — the only GREASE INTERCEPTOR that provides all these "wanted" features:

- You don't take off cover!
- Cleaned by the turn of a valve!
- Grease flows out of draw-off—no odor, no mess, no inconvenience!
- Grease is clean so that it can be sold readily.
- Intercepts over 95% of grease in waste water — keeps pipe lines from clogging. Made in a wide range of sizes.

SERIES "JH"

Josam Series No. "JH" cast iron grease interceptor at 7 to 75 G.P.M for installation on the floor, with 2" to 3" inlet and 2" to 3" outlet connections, cascade bottom, solids evacuating channel, internal air relief, visible double wall deep seal code trap, baffles and gasketed cover with low pressure chamber, copper piping grease draw-off, draw-off valve, and a flow control fitting in accord with ratings.

(O Also available with water-tight extension for recessed installation in floor or in a pit; also Low-Boy type.)

SERIES GA

OIL INTERCEPTOR

Cast iron oil interceptor with cascade bottom, centre channel, deep seal code trap, adjustable gravity draw-off, vent connections, removable sediment bucket and baffles, gasketed cover with recessed lift rings, non-submerged inlet and outlet, and flow control fitting. (Available in other sizes and types).

BACKWATER SEWER VALVE

Cast iron backwater sewer valve, with 2" - 30" bell inlet and spigot outlet, bronze vertical swing revolving flap, bronze valve seat and cast iron bolted or countersunk threaded access cover with leveling pads. (Available in a wide range of sizes and types—Nos. 1110, 1210, 1170, 1270, 1180, 1280.)

"UNITRON" CARRIERS and CLOSET FITTINGS FOR WALL-HUNG FIXTURES

ONE carrier—and ONLY ONE carrier—is used for all types or makes of closet bowls whether blow-out or syphon jet or women's urinals.

The carrier is independent of the closet fitting thereby enabling the carrier to be placed at any distance from the bowl without reinforcement. Moreover, the entire assembly can be installed in less pipe chase width than other types, thus turning waste space into usable, rentable area.

Reversible face plate on the closet fitting, the reversible carrier leg and a specially designed closet connection assembly, provide complete horizontal and vertical adjustability without additional fittings.

"CLOSE" CLOSET CARRIERS AND FITTINGS

For installation as a composite unit where pipe space is limited. Carrier is reversible to accommodate blow-out or syphon jet bowls, or women's urinals, regardless of manufacturer. The common vent on the double fitting provides more effective air circulation for the fixture and branch, and permits loop or circuit venting; full baffle deflects sewerage into stack, away from opposite fixture. Carrier is rigidly aligned and locked to fitting to form an integral unit. Fitting can be rotated 45° to meet special conditions.

CLOSET CARRIERS AND FITTINGS

Josam UNITRON Closet Carriers are designed to support, independent of wall, all types and makes of wall-hung closets and women's urinals. Josam UNITRON Closet Fittings are made in a variety of types to suit all types of installations. Select fittings from UNITRON CATALOGUE F to conform to requirements shown on drawings.

LAVATORY, SINK AND URINAL CARRIERS

Josam UNITRON Lavatory, Sink and Urinal Carriers are made in a wide range of types for lavatories, sinks, men's urinals, slabs and hospital fixtures.

FOR COMPLETE INFORMATION ON JOSAM PLUMBING DRAINAGE PRODUCTS REFER TO CATALOGUE "K", ON CARRIERS REFER TO CATALOGUE "F", OR WRITE FOR LITERATURE TODAY.

THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
**FLOOR DRAINS**

**JOSAM "SUPER-FLO" FLOOR DRAINS**

**SERIES No. 7500**

*Available in many types and sizes.*

Cast iron "Super-Flo" Non-clog Triple Drainage Floor Drain with double drainage flange and weep-holes, threaded bottom outlet, 7" round top and removable sediment bucket supporting heavy anti-tilting grate with perimeter drainage slots.

"Super-Flo" Drains provide a greater free drainage area than standard floor drains with the same size top. Moreover, since the waste water enters the perimeter slots first, the friction loss is greatly reduced and the flow rate into the drain is greater than the flow rate into a standard drain of the same size top.

**NON-CLOG TRIPLE DRAINAGE FLOOR DRAIN**

**SERIES Nos. 5420, 5440**

Cast iron Non-Clog Triple Drainage floor drain with double drainage flange and weepholes, 3" - 6" inside caulk bottom outlet (threaded outlet optional), round top and grate, removable perforated sediment bucket with auxiliary drainage rim so designed that grate cannot be set in place unless bucket is in position.

**CONDESNATE DRAIN**

**SERIES No. JC-110-QB**

Cast iron Floor Drain with double drainage flange, clamping device (optional) and 9" brass condensate funnel strainer, screwed to drain body with 2"-3"or 4" standard inside caulk outlet. (Threaded outlet optional). Series No. JC-100-QB same as Series No. JC-110-QB except without double drainage flange.

**TRENCH DRAIN**

**SERIES No. 0200**

12" x 20" cast iron trench grate(s) with rectangular bar pattern, laid in fabricated steel frame with anchor lugs. Series No. 0200R is same as Series No. 0200 except with removable rectangular stainless steel bucket.

**SHOCK ABSORBER for WATER HAMMER**

Positively and Permanently eliminates irritating noises, destructive vibrations, and breakdowns in equipment caused by water hammer... keeps pipe lines "QUIET!".

Josam Series No. 1480 Shock Absorber with steel shell housing and a specially milled compression molded ABSORBO tube and insert, with . . . (5g" to 1") threaded connection, 12 to 187 cu. in. displacement.

**SWIMMING POOL FITTINGS**

**SERIES No. 0250-KK**

**DECK TRENCH GRATE**

Josam Manual SP-6 illustrates the complete line of Josam Swimming Pool Drainage products such as supply fittings, outlets, gutter drain, overflow connections, lane markers, and interceptors and detailed plans for pools. Write for copy today!

**ROOF DRAINS**

**SERIES No. 410**

Cast iron roof drain with large sump and flange, 2" - 10" inside caulk bottom outlet (threaded outlet optional), removable combined high dome and sediment cup, and double reverse wedge non-puncturing flashing clamp device with integral gravel stop. Expansion Joint Series 1810 if desired.

**SERIES No. 4010**

Cast iron roof drain with large sump and flange 2"- 8" inside caulk bottom outlet (threaded outlet optional) with Square Top fastened to clamping collar, and loose head, round flat grate for promenade deck, and double reverse wedge, non-puncturing flashing clamp device and integral gravel stop.

**SERIES No. 4110**

Cast iron Roof Drain with large sump and flange, 2"- 8" inside caulk bottom outlet (threaded outlet optional), removable Mushroom Type Dome for exceptionally large drainage areas, and double reverse wedge non-puncturing flashing clamp device with integral gravel stop.

Cast Iron Roof Drain, round deck flange, 2"- 6" bottom spigot outlet (threaded outlet optional), removable bee hive dome securing to gravel stop, cast iron deck flange with gravel stop for attaching to asbestos cement decking by self-tapping screws and cast iron expansion joint with pressure ring and outside packed brass sleeve.  

**JC-40-D** Same as above but with deck clamp for other types of roofing.
MEDUSA WHITE PORTLAND CEMENT

Pure white, non-staining, used when a pure white or tinted effect is desired. Produces concrete and mortar of same strength as regular gray Portland Cement. Beautiful coloured effects when combined with coloured aggregates or pure mineral colours. Used for setting and pargeting cut stone, facing cast stone, interior plastering, facing of concrete blocks, steps, terrazzo, white concrete for building. Passes A.S.T.M. specifications.

MEDUSA WHITE TILE GROUT CEMENT

A white, non-staining mortar cement used for setting, pargeting and pointing cut stone and laying up face brick. Minimum shrinkage, smooth workability and great plasticity. Provides assurance against efflorescence. Easily spread and easy to tint. Sets approximately—initial, 3 hours; final, 7 hours; 15 minutes.

MEDUSA WATERPROOFING PASTE

One gallon of Medusa Waterproofing Paste weighing 10 lbs. properly waterproofs 17 sacks of cement. This repels water at the surface of the concrete, preventing water absorption which freezes and thaws, exerting a terrific force to disintegrate the masonry. Medusa Waterproofing Paste comes in 10-lb. cans, 50-lb. cans, and 200 and 400-lb. steel drums. Medusa Waterproofing pays for itself over and over again in footings, floor slabs and pargeting of outside walls.

MEDUSA RUBBER BASE PAINT

Has thermo-plastic rubber resin base that cannot be duplicated in other types of paint. Unaffected by water, alkalis, lime, and cleaning compounds. Makes a smooth, very tough finish. Especially designed for concrete floors and masonry walls, indoors. Has also been used successfully on wood, metal and plastic surfaces. Perfect coating for swimming pool walls. Ideal for office floors, floors and walls in dairies, food manufacturing plants, locker rooms—just about anywhere concrete is used. Easily applied. Excellent coverage. Requires no undersealer. Apply direct from quart or gallon can. Six colours; light gray, red, green, blue, black and white. Available in quart or gallon containers.

MEDUSA WHITE TILE GROUT CEMENT

Medusa provides two types of grout cements . . . Medusa White Tile Grout Cement for wet wall construction and Medusa Dry Wall Tile Grout Cement for dry wall construction.

The dry wall type has an additive that increases the water retention and prevents loss of water to the tile, thereby giving the grout time to harden slowly and bond perfectly.

Both assure extremely white joints free from discoloration and shrinkage cracks. Packaged in handy 25 lb. containers.

MEDUSA PORTLAND CEMENT PAINT

Has as its base Medusa White Portland Cement, with which has been ground chemicals and colour pigments of a permanent nature. Contains no oil, glue, casein or other materials affected by lime, alkali or water action. Is used on all exterior and interior concrete and stucco surfaces; wet or dry; also on brick, stone and tile. Regularly supplied in buff, cream, ivory, dove gray, green, red, avalon blue, black and white. Shipped in 10 and 50-lb. containers.

MEDUSA WATERPROOFING POWDER

This is the original stearate water-repellent waterproofing for concrete and mortar, successfully used for over 40 years. Should be used in all concrete and mortar below grade or exposed to the elements. Use 2 lbs. of Medusa Waterproofing Powder to each sack of Portland Cement. Shipped in 40-lb. paper bags.
AND REMEMBER.....

Besides quick easy and positive installation, you avoid costly repairs or replacements when you install Vitrified Plain End clay pipe and Root-Proof Couplings.

The COMPLETE Line of Structural Tile

PRODUCTS

RUG FACE TILE
HANDI-GRIP LOAD BEARING TILE
SMOOTH FACE TILE
PARTITION TILE
BEAM, GIRDER AND COLUMN COVERING
LONG SPAN FLOOR TILE
FLAT ARCH TILE
DRAIN TILE

NATCO Rug Faced Handi-Grip Tile as illustrated, supplied in mingled light red shades, 5 1/4" in height, 12" long, in widths of 3 3/4" and 8", side construction with perpendicular Rug on one face. Universal Fittings to match, supplied 3 3/4" x 5 1/4" x 12", end construction, rug one face and one end, kerfed for splitting around openings and pilasters.

NATCO Handi-Grip Load Bearing Tile for 8" Walls available in Modular Dimensions 7 3/8" x 7 3/8" x 11 3/8" also Ontario Size 8" x 8 1/8" x 12".

NATCO Headers and Stretcher Units of the same dimensions available for Backing-Up Face Brick.

For 12" Walls and 12" Tile Backing-Up an additional unit of nominal 4" Width available also 4" Universal Fitting.

All Units Furnished in Scored Faces only.

NATCO Smooth Face Tile for Interior Partitions. Smooth one or two face in Nominal widths 4", 6" and 8" available in Modular and Ontario Dimensions.

For Exterior Load Bearing available in Smooth or Textured Face. Dimensions 8" x 5 1/4" x 12"—5 Cell, and 3 3/4" x 5 1/4" x 12"—3 cell. Universal Fittings 3 3/4" x 5 1/4" x 12".

NATCO Smooth Face Tile for Backing-Up Face Brick. Headers and Stretchers in 6" and 8" Nominal widths available in Modular and Ontario Dimensions.

NATCO Partition Tile scored only for plastering, available in widths of 2", 3", 4", 5", 6", 8" and 10" x 12" x 12". Split Furring scored 1 1/2" and 2" x 12" x 12".

NATCO Drain Tile — 4" and 6" Weeping Tile evenly cut and well burned.

THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
NATCO Beam, Girder and Column Fireproofing Shoe Tile, scored, available to cover beam flanges from 4” to 16¾”. Side Fillers scored, 2” in width and in heights of 4½”, 5½”, 6”, 8½” and 12” by 12”. Can be supplied in smooth face to special order.

NATCO Long Span Floor Filler Tile manufactured 4”, 5”, 6”, 8” and 10” deep, by 12” x 12”. Soffit Tile 5½” x 4”, 5”, 6” by 12”. Gives uniform ceiling plastering surface. Design tables on request.

NATCO Flat Arch, manufactured in 6”, 8”, 10” and 12” depth suitable for heavy floor loading. Design tables on request.

NATCO Unglazed Buff or Manganese Spot. A hard burned, de-aired fire-clay product, load-bearing Modular Dimensions. Special catalogue available for shapes and sizes.

CERAMIC GLAZED TILE

NATCO Ceramic Glaze Vitrite available in 21 Standard colours for load bearing interior walls and wall furrings, veneers and wainscott in all types of industrial, institutional and commercial buildings. Modular Dimensions. Special catalogue available showing all the shapes and sizes.

NATCO Ceramic Clear Glaze furnished in a smooth, glossy, buff tinted glaze that meets many job requirements. LOWER IN COST than Ceramic Glaze and is suitable for all types of jobs where sanitation is stressed rather than any special colour. Modular Dimensions. Special catalogue available for shapes and sizes.

NATCO Glazed Segmentile for circular storage bins, available in 6” and 8” widths by 12” x 12”, suitable for storage bins for handling coal, sand, stone, ash, salt, lime, cement and ensilage. Exterior faces are wire cut texture and smooth inside. Radius to fit any standard diameter.

NATCO Unifilter Blocks are vitrified and Salt Glazed and are readily adapted to any standard type of filter bed. The total inlet area is large enough to provide a high degree of aeration and the individual slots are so close together that smaller filter stones are prevented from dropping into and clogging the run off channels.

AMERICAN BRICK

NATCO Norman Brick. Size 2¼” x 3¾” x 11½”. Furnished in Red, Buff, and Gray Ranges. Unglazed, Smooth and Textured Finishes. Also Speckled Ceramic Glazes.

NATCO Roman Brick. Size 1½” x 3½” x 11½”. Furnished in Red Mingled, Flash Red, Gray and Buff Ranges. Unglazed only. Smooth, Textured, and Split Finished—8” Bonders—Special arrangement.

NATCO “Diamond”. Size 2¼” x 3¾” x 8”. Furnished in Buff and Gray Ranges. Unglazed. Smooth and Textured Finishes.

GLAZED BRICK FOR EXTERIOR WALLS

NATCO SPECKLED CERAMIC GLAZED FACE BRICK in white and gray with heavy specks for exterior use in sizes 2½” and 2¾” heights by 8” in length, or 2¼” and 2¾” heights by 11½” in length.

LITERATURE ON REQUEST

Brochures and Detail Sheets are available for each type of the above Structural Products.
Blueprinting The Future...

Today, the changing face of Canada no longer mirrors the shallow blemish of the axe and plow alone.

Today, the deeper bite of industry prevails... punctuating the prairie's sparseness with the geometric symmetry of tapered oil rigs... splintering the brittle silence of the tundra with the thin, metallic whine of meshing gears... tapping the bubbling, frenzied energy of a thousand teeming streams... turning seasoned stands of timber into newsprint, corrugated cartons, paper cups.

For this is Canada today—eager, energetic, vital... pulsating with the potent throb and beat of countless newborn industries and skills.

And what of Canada tomorrow?

As long as science and man's inventiveness combine to weave the golden fabric of our future; quality products, manufactured and distributed by the Northern Electric Company Limited, will continue to play their part in strengthening the foundations upon which Canada's tomorrow is being built today.

**THE ARCHITECTURAL AND BUILDING CATALOGUE — 1955**
FOR YOUR
ILLUMINATION
REQUIREMENTS

CALL YOUR NEAREST
Northern Electric
OFFICE

Whether yours is an industrial, institutional, office, school or church job, the Northern Electric Illumination Specialist is ready to assist you on how to secure the best possible value for your illumination dollar.

A complete range of quality illumination products is maintained at all times on a "one-call-does-it-all" basis at "Northern" warehouses throughout Canada.

Northern Electric
SERVES YOU BEST

THIS IS THE SERVICE
Northern Electric
OFFERS YOU

STOCKS:—Complete range of illumination equipment maintained in stock at all times.

SPECIALISTS:—Are available to advise and assist you in all your illumination needs.

DISTRIBUTION:—Offices and warehouses strategically located throughout Canada for your convenience.

THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
FOR YOUR
POWER APPARATUS
REQUIREMENTS

THIS IS THE SERVICE
Northern Electric
OFFERS YOU

• SPECIALISTS:
  Are available to offer assistance to you with your Power Apparatus problems.

• STOCKS:
  Representative stocks available to render good customer service.

• DISTRIBUTION:
  Offices and warehouses strategically located throughout Canada for your convenience.

CALL YOUR NEAREST
Northern Electric
OFFICE

For your power apparatus requirements—motor control, regulators, motors, switchgear, transformers, rectifiers, power switchboards, watthour and demand meters, instruments, Infra-Red and other heating equipment, consult your nearest Northern Electric Power apparatus specialist.

An extensive range of Power Apparatus is available at all times from Northern Electric Warehouses across Canada.

Northern Electric
SERVES YOU BEST
Switchboard efficiency to meet your needs!

No. 507
PRIVATE BRANCH EXCHANGE
A small compact switchboard with a capacity of
12 Station Lines
5 Central Office Trunks
5 Connecting Circuits.
Requires about the same amount of space as the average typewriter.
Convenient and simple to operate by an attendant with other duties.

No. 555
PRIVATE BRANCH EXCHANGE
This is a modern switchboard with the new "plug-in" type units, permitting actual service requirements to be closely met.
Available in capacities of
60 and 120 Station Lines
14 Central Office Trunks
15 Cord Circuits
Two positions may be installed side-by-side to increase the maximum capacity to 240 lines.
The low design makes it convenient for attendant-receptionists to converse with employers' visitors or clients over the top of the switchboard.
STACKING CHAIRS

Here at a remarkably low price are all-purpose chairs combining versatility and convenience. These chairs can be interlocked in rigid rows of any length, or stacked tightly for compact storage.

The wide leg span prevents tipping and simultaneously creates a "wall-saving" feature. Chairs come in four basic finishes:

- Plain, or two-tone
- Fabrilite or cloth bonded to seat and back
- Fabrilite or cloth upholstered over foam rubber.
- Also available in arm chair.

Matching tables are available in a wide range of sizes and finishes.

PLAN FILES

These plan files are made in two sizes in units of five drawers each. Units can be stacked securely one above another to any desired height.

A complete stack is finished off with a leg base and a top section. Drawers have a hinged compressor at front and a hood at back to hold papers down, preventing curling and damage. Drawers can be fitted specially to order to proved compartments for smaller drawings.

Cross-division can be supplied with or without rear hood, or with rear hood and hinged front hood.

Sketches show some of the many possibilities of subdivision. Detailed measurements sent on request. Case is substantially built and reinforced. Channeled tracks allow easy action of drawers and prevent them from dropping when fully extended. If desired each section of five drawers can be fitted with Universal lock to order only.

Standard finish: Lumitone.
For engineering service, information, folders and prices, contact the Rosco plant nearest you.
Ramset Fastening System

For setting anchors or fastening to building materials like concrete, concrete blocks or steel, the Ramset Fastening system brings amazing economies both in cost and in faster completion of the work.

Ramset system replaces costly and laborious chipping and plugging in concrete, brick and other materials. It provides an almost incredibly fast and cheap replacement of drilling and tapping structural steel. It eliminates, in many instances, pre-set bolts in concrete or masonry construction.

Ramset system can be profitably applied to almost every phase of a building project—from fastening wood plates to concrete footings, to the final work of attaching wood strips to concrete floors for carpet laying. Electrical equipment, pipe hangers for water, heating or sprinkler systems, (approved by Underwriters' Laboratories of Canada) sheet metal work, heating and air conditioning ducts or acoustical ceilings . . . all are installed faster and more economically with Ramset. Whether into floors, ceilings or places difficult of access, Ramset will save time and money, get work finished faster.

The Ramset system employs either of two simple powerful tools which can be readily carried in the hand. The light duty fastening tool is available with 1/4" or 3/8" barrels. The heavy duty tool is recommended for setting fasteners in hard concrete and structural steel up to 1" thick. It is available normally with the 3/8" barrel. In operation, the proper size and type of fastener and a suitable powder cartridge are inserted into the tool. This is placed against the work, a simple forward thrust releases the safety lock, the trigger actuates the powder charge and the fastener is set instantly. In most cases the drilling of the material to be fastened is eliminated. Because a good operator can Ramset up to five fastenings per minute, time savings and reduction of cost are readily apparent.

There are approximately 100 different Ramset fasteners to select from. The fasteners are made of alloy steel, heat treated and plated. The average tensile strength of a standard light duty fastener is 4000 lbs. The shear strength of the same fastener is slightly less than 3000 lbs. The tensile strength of the heavy duty fastener is over 11,000 lbs. The shear strength of the same fastener is about 7800 lbs. The wide variety available permits the proper selection of the right fastener for any specific application. If the required fastener is of an unusual dimension our Toronto plant can produce such fasteners within a few days. Some of the Ramset fasteners can be made of No. 420 stainless steel and a token stock of such fasteners is maintained. The holding power of the fasteners is surprising. The following table gives an average of holding powers of the most popular fasteners in various materials.

Average load required to extract fastener from steel plate:

<table>
<thead>
<tr>
<th>Thickness of Plate</th>
<th>Light Duty Fastener</th>
<th>Heavy Duty Fastener</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/8&quot;</td>
<td>3200 lbs.</td>
<td>7200 lbs.</td>
</tr>
<tr>
<td>3/16&quot;</td>
<td>5100 lbs.</td>
<td>9200 lbs.</td>
</tr>
<tr>
<td>1/4&quot;</td>
<td>4700 lbs.</td>
<td>8100 lbs.</td>
</tr>
</tbody>
</table>

Average load required to extract fasteners from concrete (3000 p.s.i.)

Light Duty Fastener—1600 lbs.
Heavy Duty Fastener—6000 lbs.

Note:

To achieve best holding power in poured concrete the minimum distance from the edge of the concrete is 2" for light duty fasteners or 4" for heavy duty fasteners. The required minimum distance between fasteners is 2 1/2" for light duty fasteners and 5 1/2" for heavy duty fasteners. Complete data on holding power of all fasteners in concrete and steel are in the Ramset booklet "Modern Fastening Methods'.

Underwriters' Laboratories of Canada Limited submit Ramset fasteners regularly to severe vibrating tests. The fasteners are seated in concrete and steel and submitted to vibrations under dead load. The vibration tests were continued for a total up to 900 hours without the fasteners failing to hold. In no instance were the fasteners loosened or pulled out.

RAMSET FASTENING SYSTEM

Our book “How to Find the Right Ramset Fastener” helps you to specify drive pins or threaded studs for any application. Our field engineers located in all industrial centres are trained to give you technical assistance. They can make tests on the building site and demonstrate the holding power of Ramset fasteners in the same material into which they are going to be driven.

A 48-page book specially prepared for architects, with complete information on powder actuated fastening, is now available. Ask for your copy from your local Ramset dealer.

Are you on our mailing list? We send Ramset Newsletters regularly to give you complete information on new developments in powder actuated fastening and to show pictures of interesting applications.
ARCHITECTURAL CHARACTERISTICS

In colorless form, Plexiglas is as transparent as the finest optical glass. It is also manufactured in a complete range of transparent and translucent colors. Outstanding characteristics: transparency, outdoor stability, light transmission, light diffusion, luminous color effects, glare reduction, breakage resistance, light weight, versatility.

ARCHITECTURAL APPLICATIONS

Rohm & Haas Company of Canada, Limited sells Plexiglas acrylic plastic sheets and molding powders. Those are formed, fabricated, molded and assembled by other manufacturers for architectural use.

Architectural applications for Plexiglas are in two categories—Standard Building Products, and Custom Designed Applications.

STANDARD BUILDING PRODUCTS

- Corrugated sheets
- Daylight lower panels
- Directional signs
- Dome skylights
- Edge-lit sculpture
- Flat sheets
- Formed panels
- Lighted letter signs
- Lighting equipment
- Luminous ceilings
- Shower enclosures
- Store display fixtures: display stands, millinery and hat trees, counter dividers, drawer trays
- Three-dimensional formed letters
- The names of manufacturers, fabricators, and dealers handling specific types of standard Plexiglas products for architectural uses can be obtained from Rohm & Haas Company of Canada, Limited.

CUSTOM DESIGNED APPLICATIONS

Architectural signs
- Custom display fixtures: display envelopes, show cases, tiered display shelves, wall display boxes
- Formed windows
- Hardware: door knobs, kick plates, light switch plates, splash plates, towel rings and racks
- Interior decorative pieces: bowls, dishes, lamp bases, vases, interior-curved panels, embedded objects d'art
- Luminous store fronts
- Valance and soffit lighting shields and diffusers
- Partitions
- Spradrel panels
- Miscellaneous: models, blueprint cover, display cases, exhibit housings

TYPES OF PLEXIGLAS SHEETS

There are five types of Plexiglas sheets for architectural use:

- Plexiglas Colorless
- Plexiglas 5007 Flame-Resistant
- Plexiglas Colored
- Plexiglas II UF (Ultra-violet absorbing at 375 Millimicrons)
- Plexiglas Patterned

SERVICES AND PUBLICATIONS

Technically trained field representatives will be glad to assist architects in the selection of the proper type of Plexiglas for specific applications, advise on problems of design and installation, and suggest sources of supply for standard building products and custom fabrication.

The services of Rohm & Haas Company of Canada, Limited field representatives are augmented by the staff of a design and fabrication laboratory where new applications for Plexiglas and new techniques in its fabrication and installation are studied and developed.

The following brochures and bulletins, indicated by title and code number, are available on request:

- Design and Fabrication Data (PL-28)
- Architectural Lighting with Plexiglas (PL-202)
- Outdoor Lighting with Plexiglas (PL-242)
- Daylight Control with Louver Panels of Plexiglas (PL-226)
- Plexiglas Dome Skylights (PL-301)
- Plexiglas for Replacement Glazing (PL-251)
- Plexiglas for Architectural Signs (PL-306)
- Plexiglas for Signs (PL-287)
- Plexiglas Sign Manual (PL-231)

LUMINOUS CEILING SUPPORT DETAILS

1. Plexiglas diffusing panel. Details apply to Types C-2V2 and C-1 corrugated sheet, formed cove units and flat panels. Coffer units and 7/8 corrugated sheets need support in only one direction.
2. Brake formed sheet metal: Aluminum, stainless or coated steel. Unitram support (series P-6000) may also be used.
3. 1/8" diameter hanger rods, 30° to 45° o.e. Where supports are installed in one direction only, hangers should be braced above Plexiglas to prevent side pull.
4. Expansion clearance of 1/32" per foot of panel dimension parallel to corrugation should be provided for a temperature rise of 50° F.
5. Where minimum shadow is desired Fig. A (open type) is recommended for joints parallel to corrugation. This method also maintains the hinged panels in the same plane at the joints. Otherwise, panels may be lapped without ½" edge trim as in Fig. B.

Chemicals for Industry

ROHM & HAAS COMPANY OF CANADA LIMITED

2 MANSE ROAD, WEST HILL, ONTARIO

PLEXIGLAS is a trade mark, Reg. Canadian Pat. 07782, and in principal foreign countries.

THE ARCHITECTURAL AND BUILDING CATALOGUE—1959
Industrial plants, commercial buildings, railroads, airlines, hospitals, hotels, schools ... organizations across Canada use IBM Time Control.

Regardless of the size of the Time System, IBM Time Control provides ONE time standard throughout any organization. This time standard is maintained on all indicating, recording, and signalling units.

Every IBM installation is backed by the technical knowledge and know-how acquired by IBM in half a century of manufacturing and maintaining Time Equipment in Canada from coast-to-coast.

All IBM Time Equipment sales representatives are fully trained and qualified to assist you in discussing your particular time control need.

BRANCH OFFICES IN PRINCIPAL CITIES ACROSS CANADA
VITRICOTTA PAVERS

VERTICAL FIBER—Due to its vertical fiber structure it cannot split, chip, or pock mark in service. Laboratory abrasion tests as well as installations in actual use prove that it is incomparable in wear resistance.

PERMANENTLY NON-SKID—Because it is composed of thousands of needle-like vertical fibers which are the same from top to bottom.

RESISTANT—To all acids (except hydrofluoric) as well as alkalis, oils, hot greases, brines, milk, blood, and molten metals and glass.

SANITARY—The extremely low absorption makes it entirely sanitary for all purposes.

ECONOMICAL—For economy in floor construction it is made in the largest sizes consistent with good manufacturing practice. In spite of its classifications and required ruggedness, the VITRICOTTA PAVER is surprisingly precise in straightness and dimensions.

COLOR—VITRICOTTA PAVERS are supplied in a broad range of iron spotted brown which is rich in appearance and in harmony with industrial interiors. Also may be obtained in a light colored oatmeal range for applications where a lighter colored floor is desired.

APPLICATIONS—Although developed particularly for industrial use, the VITRICOTTA PAVER with its distinction in appearance, serviceability, and dimension is well adapted to other types of installations. It would serve effectively in other classes of buildings and locations, such as:

- Laboratories
- Commercial Buildings
- Hospitals
- Schools
- Country Clubs
- Roof Gardens
- Terraces
- Private Walks

"All agreed, gentlemen?
Chemcrete near the truck entrance" 
Laticrete/N on this floor...

Yes whenever possible, it's dollars-and-cents common sense to deal with repairs and maintenance problems before they happen... at the blueprint stage! And, with Chemcrete and Laticrete, it's possible. You can multiply many times the life and corrosion-resistance of your plant floors.

Chemcrete is a compound of high-grade cements and tremendously durable epoxy-base plastic. It's in wide demand where floors are subject to severe corrosive conditions or to heavy impact or abrasion.

Laticrete combines the strength of concrete with the resilience of latex—for a final surface of amazing staying power.

For the complete details, write or phone Dominion Rubber Company Limited for descriptive folder.

TWO INTERCOMMUNICATION SYSTEMS
AT YOUR SERVICE

NORTHERN “MAGNAPHONE”

The new MAGNAPHONE SENIOR provides a foolproof intercommunication system featuring simplified operation. All switches and keys have single function only and operate in one direction for one operation. Station selectors provide “call” or “answer,” “talk-listen” bar and “press-to-talk”. The operating procedure is always the same—to talk “master to master” or Master to sub-stations. Conference operation is a standard feature.

MASTER STATIONS—There are three models available, all for 115 volt operation. The model SM6A—for 6 stations, SM12A for 12 stations and SM12B (25 Cycle) for 12 stations. All Master stations can be equipped with a telephone handset which provides for privacy and improved transmission in noisy locations.

SUB-STATIONS—There are four models to choose from—a single speaker type for conventional operation and a two speaker model for connection to two separate Master stations.

MAGNAPHONE systems can save time and contribute to the efficiency of your business. MAGNAPHONE has universal application in offices, factories, schools, churches, restaurants, hotels and institutions where up to five sub-stations can be used.

TELETALK INTERCOM

Wonderful new way to direct a business. Easiest way to save time (and time is money!) Sparkling new Teletalk is years ahead in intercommunication—features transistors, printed circuits, Telebar control, smart styling by Brooks Stevens. New Teletalk is easiest to use, costs less to operate. It is designed so that all master stations in a system are interconnected to provide a secretive system, preventing one station from listening in on another without consent. Calls can be initiated at either speaker’s or master stations.

AMPLIFIERS—TYPE PA-35A & PA-75A

Designed specifically for medium and high power sound systems, utilized for paging and background music, these outstanding 35 and 75 watt portable amplifiers, which have the same physical size and appearance, are built to Northern Electric performance standards and combine the latest developments in audio circuitry with high quality components for long trouble free service.

AMPLIFIER—TYPE PA-14A

The PA-14A is a versatile portable 15 watt amplifier primarily designed for sound system applications. Three separately controlled inputs provide accommodation for two high impedance microphones and one crystal type phono pickup. This amplifier has an additional feature in that one microphone channel may be readily converted to various low impedance inputs by providing mounting facilities for the R 14849 type Plug-in Transformer, available as an accessory.

Primarily designed for portable use, this amplifier may be rack mounted by means of an accessory kit in the form of a combined shelf and mat assembly, and in this form, occupies 7” of standard rack space.

THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
**HEATING**

make a pair at

---

We specialize in the manufacture of base-board convectors which present an elegant answer to the heating problem in the modern home.

**Everything in Convectors:**

Illustrated above are some of our heating products. All are code-tested and bear the approval of the Institute of Boiler & Radiation Manufacturers. All are guaranteed for one full year against any manufacturing defects. Our engineering department will be glad to co-operate with architects and engineers in the design of special models of cabinets to meet specific needs.

Catalogues of Rosemount heating products will be gladly sent upon request.

ROSEMOUNT INDUSTRIES LTD
Lighting & Rosettont Industries Ltd.

Over 320 models of fluorescent and incandescent lighting fixtures.

Everything in fluorescent fixtures:
For churches, hospitals, schools, factories, offices, stores and residences.
Any model of special fluorescent fixtures made in accordance with architects' specifications and drawings. All our fixtures are guaranteed for one year and are approved by the Canadian Standards Association. Our new illustrated lighting catalogue will be gladly upon request.

Model No. 15 - "Aristocrat"

Model No. 445C - This fixture may be supplied with a silver base bulb in order to give indirect lighting.

Above are shown 10 of our most popular fluorescent fixtures.

In construction...  
DU PONT  
POLYETHYLENE  
SERVES YOU  
SO MANY WAYS!

THIS VERSATILE FILM is helping builders across Canada cut time losses, save money, and increase building efficiency. No other protective cover combines such unique properties:

- Outstanding moisture-vapour barrier.
- Unusual strength, toughness and durability.
- Unaffected by temperature extremes... remains flexible as low as minus 70°F.
- Light weight... easy to handle and apply.
- Combines top quality with top protection at low cost.

FOR VERSATILITY, ECONOMY AND DURABILITY...

NOTHING BEATS DU PONT Polyethylene Film

AS A CONCRETE CURING MEMBRANE
Moistureproof Polyethylene allows the concrete to cure at a natural rate, thus attaining the maximum durability and strength.

AS A SHELTER FOR MEN AND MATERIALS
This temporary tent of Polyethylene permits pouring of concrete in any kind of weather... provides comfortable working conditions... replaces storage sheds.

AS A PERMANENT MOISTURE-VAPOUR BARRIER
Aside from its use in walls and ceilings, Polyethylene provides additional moisture and waterproof protection when laid between fill and concrete floor.

C.M.H.C. Accepted

Please send me an illustrated folder telling all about Polyethylene in construction.

Modern CHALKBOARDS of today

Composition chalkboards in modern schools are of two distinct types. First, the SOPTONE 3/16" Asbestos Cement Fibreboard. Second, the MASTER manufactured on all tempered hardboard 1/4" or 3/16" thick. They are available in standard panels 4 feet wide and up to 16 feet in length.

CONSTRUCTION SPECIFICATIONS

Specifications require these chalkboards to be processed with a vinyl solution to develop alkali resistance and receive a pickling treatment.

Writing surface is built into the boards with the necessary chemicals and by applying with pressure fine ground slate powder supplemented by coatings of finest chalkboard slating.

The result is a non-glaring soft finish having a light reflectance factor of not more than 20%.

INSTALLATION SPECIFICATIONS

Chalkboards shall be installed in accordance with standard practice.

Special Chalkboard Cement supplied by manufacturer shall be applied in spots every 12" both horizontally and vertically. Chalkboards shall be firmly pressed into position and braced to maintain pressure for a minimum of 24 hours.

When tackboard is required, 3/16" Bulletin Board cork shall be used and installed in the same fashion.

Illustration above shows typical installation with cork bulletin board on side and top of chalkboards. Aluminum mouldings with anodized finish may be either PRES-LOK mounted on clips or SCRU-LOK, secured with chromium plated screws.

The Complete Line of Paper & Fixtures for Every Washroom

Interlake

SPECIFICATIONS FOR THE ARCHITECT AND BUILDER

Toilet Tissue Dispensers:

“TR-75” TOILET ROLL HOLDERS: Chromium-plated, heavy gauge steel, with self-locking shaft—Size 6½”x4½”x2¼”. Weight: 1½ lbs. (Dispenses any Canadian-made toilet roll).

“TF-70” INTERFOLDED TOILET CABINETS: Chromium-plated*, steel, with lock and key—Size 5”x2½”x8”. Weight: 1½ lbs. (Dispenses any Canadian-made inter-folded toilet tissue).

“TV-71” — OVAL TOILET TISSUE FIXTURE: Cast Iron, for use with oval tissue—Size: 6½”x4½”x2½”. Weight: 1½ lbs. (Not illustrated).

Paper Towel Dispensers:

“SF-85-C”—Chromium finish* (Dispenses any Canadian-made single-fold paper towel).

“MF-88” MULTIFOLD PAPER TOWEL CABINET: White enamel. 22-gauge steel. Size: 10¾”x3½”x16¾”. Weight: 6 lbs. (Dispenses Canadian multifold towels of 3” (across fold) folding.)

Waste Towel Receptacle:

“WT-89” WASTE TOWEL RECEPTACLE: White enamel finish, all steel. Free-swinging, inverted “V” top opening, Size: 12”x14”x4½”. Weight: 22 lbs. (Canvas bag inserts available separately.)

* All Chromium fixtures are triple-plated (copper — nickel — chrome)
Above are typical examples of attractive Royal partition installations. All partitioning is available in Light Grey, Sahara Tan and Willow Green.

Any number of the various panel post units can be combined to make the most effective division of valuable floor space. Variety of standard widths and heights. Can be erected or dismantled in minutes without tools. Generally free-standing, but provision is made for anchoring to walls and floors. They cut time and labour costs. Durably constructed to last a lifetime, thereby saving dollars on maintenance. As easily moved as office furniture, they can be re-arranged in countless ways.

**Pass-thru Shelf** . . . fits neatly over panel. In seven sizes to match panel widths.

**Gate—40" High**—Easily attached to post at hinge—gate jamb attached to opposite post. One width only—30".

**Bookshelf**—Convenient, sturdy shelf fits on panel top. Sizes to match panel widths.

**Plastic Post Shoe and Adjustable Glide**—Keep units level regardless of floor irregularities. Plastic shoe conceals glide.

**Shelving, bins, racks, counters and cupboards to meet any storage problem in factory, warehouse, office, hospital or public building. Constructed throughout of high quality steel which cannot warp or crack, is fire-resistant and will not distort through extremes of temperature. Installations can be quickly and easily altered, extended, dismantled and re-erected with minimum interruption, using a wrench and screw-driver. Manufactured in both open and closed models and finished in Dark Green or Grey baked enamel. Delivery from stock. Special colours can also be supplied.**

**Light goods and book storage.**

**the widest range of office furniture.**

There are units to fill every need . . . styles to satisfy every taste . . . price ranges to meet every budget. 10-year structural guarantee.
Made in a modern, up to date plant—laboratory controlled—to ensure uniform high quality. For workability, strength and durability there's a Pyramid Brand Cement for every job. Tested and proven since 1912.

ST. MARY'S CEMENT CO. LIMITED
2221 YONGE STREET, TORONTO • PHONE: HU 5-4411
Your Answer to Lower Costs

Sarnia Scaffolds provide exclusive features which assure fast, safe erection readily adapted to the physical requirements of the job. Quickly erected and easily dismantled, Sarnia reduces overall time on the job, resulting in savings in labor and rental.

All-steel tubular construction with simple, effective cross-bracing system and positive connections assure absolute rigidity and safety. Improper use, which might result in "unsafe" structures is impossible. Sarnia Scaffolds engineers and representatives will help you plan any scaffolding job, showing how you can combine savings and safety—the "S S" way to lower construction costs. For all products and services of Sarnia Scaffolds, including hoists, bleachers, grandstands, stages and the new SarniaSpan horizontal shoring, consult the yellow pages or write for complete detailed information.

THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
DESCRIPTION

The Reynolds Aluminum ReynoCoustic System makes possible a new architectural approach to the design and construction of acoustical ceilings. It provides important functional advantages not easily obtained with other systems.

The system consists of formed and perforated aluminum panels supporting a sound absorbing blanket. The blanket also may be attached to the ceiling, with panels suspended at a lower level. In new or existing buildings this system can be suspended from or attached directly to ceilings. Either concealed or direct lighting fixtures can be installed with the ReynoCoustic System.

Panels are available in the Long Span and Pyramid styles. The former is designed for covering large areas where long spans (up to 8 ft.) can serve to reduce installation costs. The Pyramid style provides an alternate treatment for areas where the Long Spans are not appropriate.

Panels are available in white painted finish, or natural aluminum finish. Supporting tees and angles are available in either white baked enamel finish or clear anodized aluminum finish.

The glass fiber blankets of 1/2-pound density and of various thicknesses were selected after tests of many sound-absorbent materials because of their uniform outstanding performance.

ADVANTAGES

Sound Absorption—The ReynoCoustic System offers excellent sound absorption characteristics. Actual test reports by independent laboratories show noise reduction coefficients above .90.

Economy—Simplicity of the installation of large panel sections and few accessories result in low installed cost. Perforated aluminum panels are easy to handle, go up fast—save labor.

Thermal Insulation—The excellent thermal insulating properties of the glass fiber blanket in the ReynoCoustic System can mean important savings in your heating and air conditioning costs. The 1/2-pound density glass fiber blanket has a "K" factor of .287 per inch thickness.

Easy Access—Individual panels of the ReynoCoustic System are easily removed from their supports to provide large access areas to wiring, plumbing, duct work and other utilities, while the utilities are conveniently concealed by the panels to provide a more attractive appearance and modern design to the ceiling.

Low Maintenance—Strong, rustproof aluminum panels will not warp, and need no protective painting. Panels can be easily removed for periodic cleaning.

Light Weight—The ReynoCoustic System, complete with angles, tees, aluminum panels and glass fiber blanket, weighs less than three-fourths pounds per square foot. This may eliminate many engineering problems in old construction.

Fast Installation—Due to the "large panel" units, the ReynoCoustic System can be installed rapidly without long interruptions of normal business activities.

Ventilating—When the sound absorbing blanket is attached to the existing ceiling with perforated aluminum panels suspended below, conditioned air can be distributed through the perforated panels. This system works equally well for warm or cold air distribution.

Moisture Resistant—Neither aluminum nor glass fiber blankets will absorb moisture. Therefore the ReynoCoustic System can be used where there is a continuous high moisture content in the air.

Modern Design—The ReynoCoustic System enables architects to achieve a strikingly different, modern appearance. Panels and supporting members can be arranged in straight lines or patterns. Concealed or direct lighting fixtures can be installed as part of the ceiling design. Other decorative materials can be combined easily and effectively into pleasing interior effects.

Fire Resistance—Every package of ReynoCoustic material carries the Underwriters' Label. The following fire hazard classifications are derived in comparison with Red Oak as 100:

| Flame Spread: | 5 to 10 |
| Fuel Contributed: | 0 |
| Smoke Developed: | 0 |

Complete test data available on request.

FIELD HOUSE AT FORT BELVOIR, VA. Ceiling area approx. 25,000 sq. ft. ReynoCoustic Long Span panels of special length (109") were laid directly on bottom flange of trusses and clipped in place. Glass Fiber blankets were used for sound absorption.
The ReynoCoustic System is ideal for use wherever efficient noise control is desired. Attractive appearance and high performance make it especially suited for hospitals, offices, schools, stores, and industrial plants. Other practical uses are found in gymnasiums, bowling alleys, theatre lobbies, restaurants and cafeterias.

**USES**

Panels—ReynoCoustic Panels are available in two styles: Long Span and Pyramid. Both are fabricated from embossed and perforated aluminum .024" in thickness. Overlapping one corrugation or rib of adjoining panels gives the ceiling continuity without open joints.

**LONG SPAN STYLE:** These ReynoCoustic panels are formed to ⅝" depth with a nominal 2.67" pitch. The ⅛" diameter perforations are arranged in a diamond pattern on ⅜" centers, giving an open area of approximately 14%. Each panel is 33⅜" wide to give nominal 32" coverage with a one-corrugation overlap. Panels are available in nominal 6' or 8' lengths. Special lengths up to 12'0" are available for sidewall application.

Pyramid STYLE: ReynoCoustic Pyramid Panels are pyramid ribbed to ⅝" depth with a nominal 1½" pitch. The .094" diameter perforations are arranged on ⅜" straight centers, giving an open area of approximately 8%. The panels are 34½" wide to give a nominal 33½" coverage with a one rib overlap. Standard panel lengths are a nominal 4' and 5'. This panel is also available in special lengths up to 12'0" for sidewall application.

NOTE: Panels, tees and angles are available in white or aluminum finish (see description). The light reflection value of unpainted aluminum finish panels is 71%—or painted panels, 78%.

**T-Sections**—These are aluminum extrusions, 2" x 2½" x ⅛" nominal size, in 12' lengths with attractive reeded bottom surface. Weight, .355 lbs. per lineal ft. Punched to receive splice plates. Material 6063-T5.

**Angle**—Aluminum extrusions 1" x 2" x ⅛" nominal size in 12' lengths with attractive reeded bottom surface. Weight, .233 lbs. per lineal ft., oval punched 4' on centers for attachment to wall. Material 6063-T5.

**Splice Plate**—Aluminum extrusions ⅞" x ⅜" x 5" nominal size. Weight, .188 lbs. per lineal ft. Punched to receive suspension wire. Material 6063-T5.

**Suspension**—Galvanized steel wire or strap. No. 9 W & M gauge or ⅛" x 1" strap.

**Hold-Down Clip**—The hold-down clip fits over the tee to secure two adjoining panels. It is useful in areas where it is necessary for panels to be held down on the tees.

**REYNOCOUSTIC ABSORPTION DATA**

Glass Fiber Blanket for the ReynoCoustic System provides excellent sound absorption with noise reduction coefficients up to .90 plus. Blanket is available in various thicknesses from ⅛" to 1⅛" in ½ lb. density. By varying the thickness of glass fiber blanket, the desired degree of noise control can be obtained. Following are test results from an independent testing agency, the approved testing agency for the Acoustical Materials Association:

</table>
Aluminum panel ceilings can be suspended from roof, framing or trusswork by wires or metal straps. Panels are supported at walls by aluminum angles and between walls by aluminum T-sections. Angles are continuous and attached to walls at 48" intervals. The maximum spacing of suspension wires or straps along each T-section is 72". Where T-sections support lighting fixtures or other utilities, the spacing should not exceed 36".

When planning new construction, it is desirable to provide for incorporation of supports for the ceiling systems as construction progresses.

**SIDEWALL INSTALLATION**

ReynoCoustic panels, both Long Span and Pyramid types, can be installed on side walls as shown. Where deflection is not a factor, both types of ReynoCoustic panels may be used in lengths up to 12-feet maximum.

**DIRECT ATTACHMENT TO CEILING**

Where the existing ceiling or wall is suitable for holding nails and screws, panels can be attached directly. Aluminum supporting angles are first attached to walls encircling the room. The blanket is secured either by cementing or by the use of clips, and the aluminum panels then fastened to the ceiling with screws.

As an alternate method, blanket of the same length and coverage width can be used and need not be separately attached. The blanket is simply laid on individual panels and the panel fastened to the ceiling.

**USE OF FURRING STRIPS**

Where the existing ceilings and walls will not hold nails or screws, use 1 x 4 furring strips for blankets 3/4" and under in thickness. Use 2 x 4's for blankets over 3/4". Fasten these strips to the ceiling with toggle bolts, expansion shields, or other suitable means, spacing the strips on centers 3/4" greater than the length of the panels. Install the blanket, aluminum panels and aluminum strips as described for "direct attachment to ceiling".

by YORK STEEL

YORK STEEL CONSTRUCTION LIMITED

75 Ingram Drive - Toronto
VAPOR LINOVECTOR* - FINNED TUBE RADIATION for Industrial Installations

VAPOR patented offset fin construction provides fullest efficiency and absolute rigidity. Fins are embedded in steel pressure tube finished with chamfered or threaded ends or in hard copper water tube with ends finished for solder jointing. Copper tube gives choice of either steel or aluminum fins. Fins are guaranteed to stay tight under all normal conditions.

VAPOR Steel Radiation is guaranteed for working pressures which follow the ASA B30.1 Code for pressure piping. VAPOR Copper radiation is made to withstand pressures up to 550 psi at 400°F.

**STYLE CS ENCLOSURES**

VAPOR Style CS Enclosures are designed to deflect the warm air flow from the wall into the room interior and are especially adaptable for schools, hospitals and similar buildings. They are solidly constructed from 18-gauge steel or aluminum in increments of 3-inches with maximum length of 8-feet and to accommodate one, two or three row installations. Where the cover does not extend from wall to wall, end enclosures are provided. These enclosures are easy and quick to install and completely permanent.

**ADVANTAGES**

- Single rugged support for both enclosure and radiation.
- Only two holes required for mounting to wall.
- Quick and easy to install—no hanging strip required.
- Cover can be fastened to support bracket at the bottom allowing for smooth front, free of fastening screws.

**STYLE F COVERS**

VAPOR Solid Front LINOVECTOR Style F is the same shape as VAPOR Style X Expanded Metal Grille. The top is of lip-slot construction with solid front. Style F for single or multiple rows may be safely suspended directly from the radiation. For added safety, fronts may be bolted to radiation.

Made of 18-gauge steel or aluminum, the maximum length of any one piece is 10 feet. Lengths over 10 feet are made from a 10-foot piece plus the required length unless specified equal lengths. Ends are normally left open. However, End Enclosures can be furnished if desired. Metal is galvanite or prime coated.

*TM Reg'd.
VAPOR LINOVECTOR - CONTINUED

• STYLE KS ENCLOSURES

VAPOR Style KS Enclosures are designed to provide a baseboard type enclosure for commercial and industrial installation. Front and top is a single piece mounted on full metal backing. Outlet louvres are in the front skirt to direct convection currents away from the wall and to improve temperature distribution.

Made of 18-gauge steel, galvanite or prime coated, KS Enclosures are furnished in lengths of 3” increments to maximum of 8-feet. A full line of accessories is available.

VAPOR RADIVECTOR - FINNED TUBE RADIATION

The original Baseboard Radiation

VAPOR TRIMLINE RADIVECTOR cover has been engineered for beauty, performance and easier on-the-job installation. The long, smooth “skirt” radiates floor-level comfort, while the trim outlet slot allows for ample convection.

TRIMLINE cover is available in lengths up to 16 feet. The new cover requires fewer joining pieces and it snaps on—in a jiffy. Dampers can now be installed on the job. Cover is finished in prime coat of gray paint or zinc coating, at the factory’s discretion.

STYLE 64

STYLE 97
UNITRANE AIR CONDITIONERS
Utilize chilled or heated water for year-round air conditioning of a few rooms to a skyscraper. Individually, dial-controlled, smart cabinets or fully recessed units. Horizontal models readily installed at ceiling as illustrated (right). Ideal for air conditioning existing buildings.
Write for Bulletin B2-13

CENTRAVAC
Hermetic Centrifugal Water Chiller from 45 to 1500 tons. Light weight, vibration-free heart of the air conditioning system. Automatically adjusts to varying load requirements for low cost operation.
Write for Bulletin DS-399

RECIPIROCATING COMPRESSORS
From 10 to 150 ton ranges, in 22 models utilizing refrigerant 12 and 22. Direct drive, constant speed design permits use of standard general purpose motors. Completely enclosed, automatic cylinder unloader system cuts power consumption on reduced loads for substantial power saving.
Write for Bulletin DS-361

INDUCTION UNITRANE
For induction air conditioning system. Provides both heating and cooling with control of temperature, humidity and air movement. Combined with true filtering of all air.
Write for Bulletin DS-425

HORIZONTAL UNITRANE
Depth of only 9 inches

TRANE SELF CONTAINED AIR CONDITIONERS
A complete packaged air conditioning unit for offices, stores, restaurants. Attractive units provide high efficiency in minimum floor space. Heating as well as cooling supplied by one unit. Capacity range from 3 to 30 tons.
Write for Bulletin B10-11

COLD GENERATORS
Packaged water chillers, completely wired, piped, charged and tested at factory. Ten sizes from 10 to 150 h.p.
Write for Bulletin DS-352

For complete details and technical data write for latest Trane bulletins.
CLIMATE CHANGERS

Basic air handling units engineered to meet largest possible variety of air conditioning requirements. All models provide complete air conditioning cooling, heating, circulating, humidifying, de-humidifying, filtering and ventilating (complete or in any combination desired). Multiple zone units available to condition up to twenty-five zones from one unit.

Write for Bulletin B1-22

COILS

Extended Surface Coils — important contribution of Trane to the heating and cooling industry — are available in a complete line for a multitude of applications. Feature of Trane Coils is the exclusive Delta Flo Fin which produces turbulence across the entire fin area, reducing insulating air film and increasing efficiency.

End view of Trane Delta Flo Fin plates shows formed “delta”

Heating Coils in wide range of types and capacities.
Write for Bulletin R7-12 RR

COOLING COILS

Direct Expansion and Water cooling.
Write for Bulletin B3-12 RR

FANS

Trane Centrifugal Fans are available in Class I, II and III. Backwardly Inclined and Forward Curved Models in a wide range of sizes: Direct Drive and Belt Driven Trane Utility Fans, in one of the most complete lines available.

Write for Bulletins FC Fan B5-21
BI Fan B5-31
Class III DS-348C Utility Fan B5-13
and Propeller Fan B5-41.

MANUFACTURING ENGINEERS OF AIR CONDITIONING • HEATING • VENTILATING EQUIPMENT
HORIZONTAL HEATERS
Available in 24 sizes for space and spot heating. Features famous Trane Coil and specially designed, broad-blade fan. Patented Trane Louvre Fin Diffuser permits air stream to be directed in unlimited number of diffusion patterns.
Write for Bulletin R3-14

WALL FIN CONVECTORS
Complete variety of sizes and types offers the widest choice for all applications. The exclusive enclosure design with built-in reinforcing in the form of gussets, gasket channel, formed bottom edge and slip joints provides maximum strength and rigidity with slim, smooth, uncluttered appearance. Elements mounted on cradles running on ball bearings, ensure minimum noise from expansion/contraction cycle.
Write for Bulletin R2-13

UNIT HEATERS
For a wide range of industrial, commercial and process applications. The most complete line in the industry.

PROJECTION HEATERS
Vertical discharge units project heat down to floor line from ceiling installation, eliminating stratification. Available in 18 sizes for low and high pressure steam and hot water. Exclusive Trane Louvre Cone Diffuser provides fingertip adjustment for unlimited choice of heating patterns from varying ceiling heights.
Write for Bulletin R3-14

TORRIVENT
Adaptable; large capacity, heavy duty blower-type heating units. Many casing styles, damper arrangements and discharge positions may be used for either free delivery or for discharge into duct work. Introducing tempered ventilation air, or for 100% recirculation of room air.
Write for Bulletin R4-12
CONVECTOR-RADIATORS

For quick, clean comfortable heat. For steam or hot water. Originator of the Convector, Trane have introduced developments which have made "TRANE" the standard of acceptance in this field and the leader in popularity by a wide margin. "Code-Rated" The ratings of Trane Conve-

ectors have been determined in conformance with Commercial Standard CS140-47 as developed cooperatively by the trade and the National Bureau of Standards, U.S. Department of Commerce and the said ratings have been approved by the Convector Rating Committee.

Write for Bulletin R1-14

KB UNIT VENTILATORS

With Kenetic Barrier action. Takes fresh air as required, blends with return air, filters, warms and gently circulates throughout the classroom. Discharges air from lateral extensions along entire window length for draft-free heating and ventilation.

Write for Bulletin DS-340

BASEBOARD CONVECTORS

Extended surface heating element concealed in attractive cabinet. Effectively covers all outside walls for efficiency and comfort. Low cost hot water heating for the home, apartment or office. Easy to install.

STEEL STRUCTURES

Many famous landmarks throughout Canada testify to the accomplishments of Dominion Bridge in the structural field — but our work is by no means confined to large buildings.

From the Maritimes to the Pacific, steel structures of all types and sizes have been fabricated and erected by Dominion Bridge.

Whether your requirements are small or large, Dominion Bridge offers sound engineering, consistent workmanship and attention to detail — backed by 75 years' experience.

Left: Steelwork for C.N.R. Queen Elizabeth Hotel, Montreal.

Application of D.B. Long Span and D.B. Short Span Joists.  Long Span Joists are shown at left and Short Span Joists at right.

D.B. SHORT SPAN JOISTS

The D.B. Short Span joist is an improved type of steel bar joist especially designed to meet the requirements of modern floor and roof construction in light occupancy buildings.  "Double T" sections, produced in our own rolling mills, which form the top and bottom chords are securely welded to a web system of round bars.  This construction ensures great strength with light weight and provides a rigid and dependable building component.  It is easy to erect and does not interfere with conduits or pipework passing through the joists.

D.B. all-welded Short Span joists are available in depths of 8 to 16 inches, and for spans up to 32 feet.

Write for Catalogue ST-116

D.B. LONG SPAN JOISTS

Developed by Dominion Bridge Company, D.B. Long Span joists are designed to provide the utmost economy in the construction of buildings with long clear spans.  These all-welded steel joists are fabricated in standard designs with spans varying from 25 to 72 feet and with loading capacities of 200 to 700 lbs. per lineal foot.  They are built with parallel chords for either floors or roofs, or with sloping top chords for pitched roofs.

Ease of erection, adaptability, great strength with light weight — these features make the D.B. Long Span joist a practical, economical component for a variety of applications.

Write for Catalogue ST-118

THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
BOILERS

Dominion Bridge offers several distinct types, in a wide range of sizes—from small heating boilers to large steam generators for process and power purposes.

WATER TUBE TYPES

Custom built boilers for central heating and power purposes, illustrated at right. Suitable for all types of firing and available for a wide range of pressures and steam capacities. Write for Catalogue BT-103.

Type SB: A compact and efficient unit of standardized design for the small to medium capacity field. Write for Catalogue BT-113.

Package Type: Fully equipped and ready to connect to fuel and steam lines. Write for Catalogue BT—121.

Victory Straight Tube: A simple type of water tube boiler for moderately large outputs. Write for Catalogue BT-117.

FIRE TUBE TYPES

Package Units: Based on the well known Scotch Dry Back boilers, these package units incorporate a number of recently developed refinements and improvements. They are built for high and low pressure requirements with capacities ranging from 35 to 500 developed H.P. and can be supplied with any well established type of firing equipment or without firing equipment if desired. These package unit boilers are suitable for oil, gas or combination oil-gas firing with either natural, forced or induced draft. Write for Catalogue BT-120.

Robb-Victor Boilers: Especially designed for low pressure steam and hot water heating with forced or natural circulation. Write for Catalogue BT-116.

H.R.T.: Suitable for all types of firing, has universal application in the medium power field. Write for Catalogue BT-118.

M-M SAFETY GRATINGS

M-M non-slip safety gratings shed oil and water and permit maximum transmission of light and ventilating air. Fixed, movable or hinged gratings can be supplied for large industrial floor spaces, walkways and stairs. M-M stair treads are available from stock in various sizes or are custom-built for special requirements. For full information on M-M gratings and steel trough stairs, write for Catalogue TT-102.
THE CEMENT MARKETING CO., LTD.

“SNOWCRETE”—British White Portland Cement made by The Cement Marketing Co., Ltd., is almost universally used for the manufacture of Pre-Cast Products, for Terrazzo, Swimming Pools, Stucco in all its forms, including rough-casting and pebble—dashing, and dadoes. “Snowcrete” is a true Portland cement and gives the same satisfactory service as ordinary Portland cement—increasing in strength as it increases in age. Ordinary Portland cement is grey in color because of the presence of oxide of iron. On the other hand, “Snowcrete” owes its whiteness to the fact that it is almost free from that constituent.

Colferro—rapid hardening type is available in two shades, buff and red—suitable for coloring mass concrete roads, bridges, paving slabs, etc.

“IMPERMO”—Cement Waterproofing Compound is a water-repellent material for adding to cement to overcome capillary moisture absorption by cement and concrete. It is supplied in the form of a powder which should be thoroughly mixed with Portland Cement before the cement is mixed with the aggregate. Only 2 lbs. Impermo is necessary to every 100 lbs. of cement. Impermo waterproofs concrete, cement renderings, cast stone, etc., and should be specified where impermeability is essential.

“SNOWCEM”—Decorative Waterproof Coating for concrete, brick, stone, etc., provides freedom from dampness which, combined with brightness, are essential requirements in domestic, industrial, and agricultural structures. “Snowcem” provides these qualities by giving a waterproof, light-reflecting, hard, washable and dustless facing to internal or external surfaces of concrete, brick, cement rendering, asbestos cement; “Snowcem” is supplied in white, cream, deep cream, buff, dark grey, pale grey, pink, yellow, terra cotta, green and blue. It should not be used on surfaces containing Gypsum plaster.

FEDERAL SEABoard TERRA COTTA CORPORATION

For color and character which are easily designed into new or remodelled buildings with today’s Architectural Terra Cotta. You can select any color under the sun—choose any texture imaginable—and design in large units or small for interiors or exteriors. Architectural Terra Cotta is custom-made to your specifications—for plain surfaces or decorative sculpture. The initial cost is less than you’d expect . . . and maintenance consists only of simple soap-and-water washings.

Construction detail, data, color samples, advice on preliminary sketches, will be furnished promptly without charge on Architectural Terra Cotta and Ceramic Veneer.
Wooster's superior quality is proven by many years of service and the approval of leading architectural firms, industries and government agencies. You can depend on Wooster for all your requirements in safety treads and thresholds. Shown are just a few typical examples—portfolios of detail plates illustrating 98% of all applications are available. Our engineering department will cooperate in recommendations on special projects.

Specify the GENUINE . . . . . . . . .

Whitco hardware is backed by a generation of field testing. Several million sets are now in use. Adaptable to all sizes and types of casement, awning type windows and transoms.

Specify the GENUINE . . . for these features

. . . low labor costs . . . easy installation
. . . simple mill detail required
. . . reversible action . . . for easy, two-side window cleaning
. . . interchangeable . . . for right or left hand use
. . . needs no lubrication
. . . sag-proof, chatterproof construction
. . . Eternaplated steel . . . or solid brass

FOR CASEMENT SASH — 1½" SERIES "X"—Designed for 1½" casement sash, Whitco series "X" is an accepted standard. Like all Whitco sash hardware, it is interchangeable and need not be specified as right-or-left swing casement sash. The width of the casement sash and the sash thickness are all that need be considered.

THE ARCHITECTURAL AND BUILDING CATALOGUE — 1959
Whatever your project, residential or commercial... here is the team that meets your window needs!

DESIGNED TO MEET THE DEMANDS OF BUILDERS AND BUYERS

Today's architectural standards demand more natural light, more convenience. These are combined in 'Silent-Glide' Sashless Side-Sliding Windows and 'signet' Insulating Glass Units.

'Silent-Glide' windows offer maximum light and smart, modern appearance. Framed in wood for extra warmth, these windows slide in flexible, weather-resistant Neoprene. Easily removed from inside for cleaning, they give permanent, rattle-free operation. The pencil-slim interlocking meeting rail is centered in each unit. A complete size range is available for all standard openings, or they can be custom-built to fit your specific requirements.

'signet' Insulating Glass Units carry a five-year guarantee against dust or film forming on inner glass surfaces. The hermetically sealed dry air contributes to lower heating costs. For all types of window installation, industrial, residential or commercial, 'signet' Insulating Glass Units give complete satisfaction to architect, builder and buyer.

Safe - Strong - Permanent

SPECIALY DESIGNED FOR PSYCHIATRIC WARDS, MENTAL HOSPITALS AND REFORMATORIES...

Saflex
SECURITY SCREENS

The unique yet simple design of 'saflex' provides a shock-resistant security screen that admits light and ventilation. Illustrated above is the Aurora Mental Hospital with 'saflex' installation.

The Architectural and Building Catalogue — 1959
DOMINION OILCLOTH & LINOLEUM CO.
LIMITED
MONTREAL, CANADA

Manufacturers of Dominion Linoleum — Battleship, Marboleum, Handicraft, Jaspe and others; Dominion Vinyl Tile; Dominion asphalt Tile; Cork Bulletin Board, Vinyl Domoleather Wallcovering, etc.

Dominion Linoleum has weathered almost a century of use and aggressive competition from other types of floorings. Long experience in the flooring industry has resulted in superior manufacturing methods, improved materials and better colours so that now, more than at any other time, linoleum is a wise investment. Today Dominion Linoleum floors surpass their predecessors in finish and colour while retaining their established standards of durability and easy maintenance.

The finest floor decorating medium in existence, Dominion Linoleum provides unusual flexibility for the planning of original, exclusive designs. Anything is possible from the simplest of geometric combinations to the most futuristic of abstracts.

MATERIAL AVAILABLE

Dominion Linoleum is manufactured in two types (canvas-backed and felt backed), in four basic design ranges (Marboleum, Handicraft, Jaspe and Battleship) in three pattern design ranges (Tiling, Moulded and Embossed) and in five gauges (AAA, AA, A, Standard and Domestic). Dominion Linoleum conforms to the requirements of C.S.A. Specification A146.

Canvas-Backed Linoleum is manufactured by calandering pigmented composition to a jute canvas. It is a long life, heavy duty, extremely resilient type flooring manufactured only in A and heavier gauges.

Felt Backed Linoleum is manufactured by uniting a similar pigmented composition as used for canvas-backed linoleum, to a bituminized felt backing. It is manufactured in A gauge as well as lighter gauges.

Yard Goods — are manufactured 2 yards (6 feet) wide in lengths up to 30 yards (90 feet). AA and AAA gauges are usually rolled in shorter lengths.

Tile Goods — are manufactured in 9"x9" and 12"x12" sizes. Special sizes are available on request. Tiles are die cut true and square.

Write for samples, further technical information and actual-use illustrations to Dominion Oilcloth & Linoleum Co. Limited, Montreal.
Pre-formed Cove Base — manufactured in AA gauge linoleum only, and to special order. Height is 6", extension from wall 2" and cove is 1½" radius.

Linoleum Strips are available from ½" to 12" wide. Special widths to order.

Special Designs—inserts, motifs, crests, etc., cut from linoleum ready for insertion into a linoleum floor can be made to your requirements and/or details in our factory.

AAA and AA — for severe commercial applications.
A Canvas Back — for commercial and quality residential applications.
A Felt Back — for commercial and quality residential applications.
Standard — for residential applications.
Domestic — for light duty residential applications.

SERVICES AVAILABLE

The following services are available from the company sales offices and district representatives.

1. Technical Assistance and advice on matters related to resilient flooring.
2. Research facilities (at head office) to report on new methods, materials, or specific problems related to resilient flooring.
3. Designing and/or providing linoleum motifs, crests, etc., of special design ready for insertion in linoleum surfaces.
4. Complete colour planning for floors.

Ideal for hospitals, schools, churches, institutions, offices, reception areas, restaurants, stores, apartment buildings and homes. Following are only a few of Canada's large buildings which use Dominion Linoleum extensively: Montreal General Hospital, Montreal, P.Q., Knox Presbyterian Church, Oakville, Ont., St. Justine's Hospital, Montreal, P.Q., St. Jean Gualbert Church, Laval-sur-le-Lac, P.Q., Montreal Children's Hospital, Montreal, P.Q., Jewish General Hospital, Montreal, P.Q., Maisonneuve Hospital, Montreal, P.Q., University Hospital, Saskatoon, Sask., Montreal University (Dental Clinic), Montreal, P.Q., John Rennie High School, Pointe Claire, P.Q., Kingsford Smith School, Vancouver, B.C., Crown Life Insurance Co., Toronto, Ont., Dept. of Public Works (Fleet and York Sts.), Toronto, Ont., Cockfield, Brown Building, Toronto, Ont., Saskatoon City Hall, Saskatoon, Sask., Wawanesa Mutual Insurance Co., Montreal.

For further information on linoleum in business buildings, write for booklet, "Dominion Linoleum Specification and Technical Manual".
MANUFACTURERS OF:

1. Aluminum Double Hung windows with split frame
2. Aluminum Double Hung windows with insulated double glazing. Both sash and frame sections are thermo insulated
3. Architecturally Projecting windows, single or coupled
4. Aluminum Casement windows
5. Aluminum Split section vertically pivoted windows with double thermo glazing. Specially designed for air-conditioned buildings
6. Aluminum Horizontal Sliding Windows
7. Aluminum Doors, Entrances and Curtain Wall, with split sections and thermo insulation
8. Security Aluminum 2 and 3 channel storm windows
9. Security Aluminum storm doors

Our qualified Engineers and Droughtsmen are at your disposal.

Specify “MILBERN” for the best.
VERTICAL TRANSPORTATION

OTIS ELEVATOR COMPANY LIMITED

1959
Vertical transportation . . . like many other building facilities . . . must be tailored to a building's individual requirements.

Otis equipment is especially designed to meet the individual traffic needs of your building. Whether it be passengers or freight . . . Otis will provide you with the most efficient and economical system of vertical transportation.

The opposite page refers you to the page in this catalog where you'll find detailed descriptions on all type of Otis equipment.

**MODERNIZATION SERVICE**

The equipment and services described and illustrated in this booklet are available for building modernization programs as well as new construction projects.

If you have a modernization program pending, an Otis Representative will be happy to sit down with you and explore, without obligation, the possibilities of extending the modernization program to your vertical transportation equipment. He will be glad to give you a comprehensive set of recommendations plus a cost estimate.

Generally speaking, building planners who take advantage of this offer find that integrating the vertical transportation changes with the major building alterations results in appreciable economies and simplifies construction activity. For example: The plans for one building's modernization included both an elevator modernization to Autotronic elevating and the addition of a complete air-conditioning system. The modernization to Autotronic elevating eliminated the need for four of the 16 manually-operated elevators. The building planners handling this major job—seizing this opportunity to save time, expense and valuable space—used the reclaimed hoistways for the air-conditioning ducts.

For further information on elevator modernization, write for booklet or just call the nearest Otis office.

**ELEVATOR PLANNING SERVICE**

In your planning you'll need more information than we have been able to include here. You can get the help of Otis engineers, whether your building is large or small, new or old.

This is a service we're happy to offer without obligation to architects, engineers and building planners everywhere. For basic considerations in elevating various types of buildings write for booklet.

**MAINTENANCE SERVICE**

For the benefit of owner and tenant alike, the vertical transportation equipment you plan into a building should keep operating like new. To assure such service, Otis offers its Complete Maintenance Plan.

Under this plan the complete responsibility for the care of the equipment is placed in the hands of the manufacturer. Otis provides:

- the scientific methods, standards and tools needed to maintain the equipment so that it will deliver all of the performance built into it
- trained Otis personnel to regularly service the equipment, make all necessary repairs and renew worn parts as required
- conveniently located warehouses, well-stocked with genuine Otis parts and lubricants

And this scientific maintenance—covered by a flat monthly charge that is easily budgeted—is backed by the kind of experience which has pioneered EVERY major elevator development.

When maintained by Otis, an elevator or escalator continues to give all the service it was designed to give, regardless of age or usage. Otis-maintained equipment never wears out!

CONTINUOUSLY OPERATING, AUTOMATIC ELEVATORS FOR HIGH SPEED OPERATION

Autotronic Without Attendant elevators are completely automatic elevators. Individual car operation is automatic and electronic. Group supervision of the cars is automatic and electronic. Autotronic Without Attendant elevators have been in successful operation since 1950.

CAR OPERATION

On Autotronic Without Attendant elevators passengers simply touch electronic buttons for the floors they want. The button glows to show the call is registered. The automatic devices of these electronic elevators replace the elevator attendant and automatically start the car. A load-weighing device causes a full car to be automatically dispatched ahead of schedule; and automatically causes a full car to run non-stop, answering only within-the-car calls, until its load is decreased. Electronic detectors mounted on the car doors give the doors a "sense of distance" while closing. They cause doors to stop and reopen only when nearing a passenger in their path.

ELECTRONIC ELEVATOR DOORS

Only Autotronic Without Attendant elevators have an electronic zone of detection. The electronic detector units are mounted on the car doors from floor to shoulder height. They protect passengers entering or leaving the car from both car and hoistway doors.

The electronic zone speeds service. Doors close promptly after each stop. If there is a chance of passenger interference, the electronic zone detects the passenger's presence. The doors reverse before they touch the passenger. If there is no chance of interference, the doors continue to close without unnecessary car delay.

If a talkative passenger lingers overlong in the doorway, the electronic zone becomes inoperative, a buzzer sounds, the doors begin to close at a greatly reduced speed, and gently but firmly "nudge" the passenger out of the doorway.

To stop a car, a passenger touches an UP or DOWN electronic touch button at his landing, the button glows to show that the call is registered, and the next available car approaching the floor in the proper direction stops level with the landing. The passenger steps into the car and touches an electronic button on the car control panel to register his "car call." The doors close, elevator accelerates, "thinks ahead" to its next stop, lights a directional hall signal in advance of its landing stop, decelerates and starts to open its doors while leveling into the landing—all automatically.
ADVANTAGES OF AUTOTRONIC Without Attendant ELEVATORS

- The human element is minimized. Some buildings require no elevator personnel; others, a starter to direct traffic and answer questions.

- High speed, intensive service is maintained. Automatic controls keep car movements related to traffic demands for maximum quantity and quality of service.

- When a car is required for independent service, it's a simple matter of operating a switch on the elevator's lobby control panel. The group supervisory system compensates automatically for the car taken out of group service. The person operating the independent car is in complete control of its operation. Completely automatic independent service is also available as an optional extra.

- Tenants are enthusiastic about Autotronic Without Attendant elevators. They register calls for one another and tell inexperienced riders what to do.

- Savings per car per year can be as high as $8,000. The savings permit rapid amortization of the elevator investment.

AUTOTRONIC Without Attendant INSTALLATIONS

Here are a few of the many busy buildings in Canada that have contracted for Autotronic Without Attendant elevators:

- Hotel Dieu Hospital
  Quebec, P.Q.
- Bank of Montreal
  Montreal, P.Q.
- Prudential Assurance
  Montreal, Que.
- Imperial Oil Bldg.
  Toronto, Ontario
- Richmond Bldg.
  Toronto, Ontario
- Royal Bank of Canada
  Hamilton, Ontario
- Sovereign Life
  Winnipeg, Manitoba
- Alberta Wheat Pool
  Calgary, Alberta
- B.C. Telephone Company
  Vancouver, B.C.
- Burrard Office Bldg.
  Vancouver, B.C.

Electronic detectors give doors a “sense of distance,” cause doors to stop and reopen only when nearing a passenger in their path.

Passengers simply touch buttons for the floors they want; then cars operate automatically.
GROUP SUPERVISORY SYSTEMS

Autotronic Without Attendant elevators are coordinated for group operation by an automatic group supervisory system. The traffic itself tells the elevators what to do. Both traffic demand and elevator performance data are measured automatically and analyzed continuously. Changes in the operation of the elevator group to match the traffic demand are made as soon and as often as required. The elevator group is operated on programs engineered to get the most efficient service from the elevators in relation to the prevailing type of traffic.

Two group supervisory systems are available. The system selected for a particular elevator group is dependent upon the number of elevators in the group. A 6 Program System for maximum quantity and quality of service is recommended for groups of 4 or more elevators. A 4 Program System is recommended for groups of 2 or 3 elevators.

6 PROGRAM SYSTEM (FOR 4 OR MORE ELEVATORS)

Autotronic electronic equipment provides the necessary regularity and distribution of cars for the program in operation. Depending upon the program, the cars are operated on a forcing time schedule to insure minimum round-trip time, and consequently, a shorter wait; the ratio of Up to Down cars is balanced and rebalanced to match the service demands of equal up-down, heavier-down and heavier-up traffic; service is further equalized to all floors through zone return operation by temporarily assigning certain cars to the lower floors to handle sudden down traffic surges; a Forgotten Man Pickup is put into action should Down waiting time become overlong. Because of the automatic features, the starter is left free to direct traffic and serve the needs of tenants and visitors.

4 PROGRAM SYSTEM (FOR 2 OR 3 ELEVATORS)

The 4 Program System automatically coordinates the operation of a group of two or three elevators. It provides Up Peak, Up-Down, Down Peak and Intermittent programs. The methods of car operation on these programs are not identical to those used for the 6 Program System. However, each program is flexible and allows for surges and lulls within the general prevailing traffic without interfering with the effectiveness of the system.
The system keeps the cars active and so well distributed that every floor gets frequent, regular service. Large bunches of passengers cannot upset the UP-DOWN program. The coordinating system helps the cars accommodate the large bunches, but at the same time it keeps the cars in position to give good service to all passengers, wherever they may be.

### 2. HEAVIER-DOWN

At the beginning of the lunch-hour, DOWN traffic is heavier than UP traffic. The group is automatically rebalanced to take care of the unequal traffic flow. The dispatching equipment adjusts the UP and DOWN dispatching signals, increases the quantity of service in the DOWN direction yet maintains equal quality of service in both directions.

### 3. HEAVIER-UP

As lunch-hour ends, the program changes and the 6 Program System rebalances the cars to provide the extra service for UP passengers.

### 4. UP-PEAK

Calls are registered, cars are dispatched UP from the main landing at timed intervals. If a car fills ahead of time, it departs ahead of schedule... and the dispatching of the other cars is automatically advanced. Cars reverse at their highest call and return for new loads.

### 5. DOWN-PEAK

For the evening rush, automatic timing dispatches cars from the upper terminal. They time each down landing call and automatically provide special service—Zone Return Operation—for lower floors if waiting time becomes excessive.

### 6. INTERMITTENT

A program to handle the light traffic of off hours. One or more cars are used, and park at the main floor. Service is "on-call." If the traffic demand increases, additional cars are automatically brought into service.

NOTES:
1. Center opening doors recommended.
2. Dimensions of machine room depend on orientation and number of hoistways in building.

This is general data. Your local Otis Representative will be happy to work with you on the preparation of working drawings.

Minimum pit depths are measured from lower landing floor to pit floor. Minimum overhead heights are measured from upper landing floor to top of machine beam supports. Requirements vary with local Codes. The dimensions in this table meet CSA requirements.
ON CALL" ELEVATORS FOR APARTMENT HOUSES, HOSPITALS, FACTORIES, SMALL OFFICE BUILDINGS, AND HOTELS, ETC.

OPERATION WITHOUT ATTENDANT

Otis Full Collective Control is suggested for buildings with light moderate traffic. It keeps an elevator instantly available for service at any time, and never makes mistakes. It gives prompt, efficient service by itself, at low operating cost.

As the elevator travels up and down the hoistway, it "collects" all UP calls on its UP trip; reverses automatically at its highest call; "collects" all DOWN calls on its DOWN trip. It "stores" all calls until they are answered.

Power operation is recommended for car and hoistway doors. With power operation, a safety shoe is provided to protect passengers who may be crossing the threshold when the doors start to close. In the event swing doors are provided for the hoistway entrances, a power operated sliding door should be provided on the car. Write for booklets.

OPERATION WITH AN ATTENDANT

For buildings that need a part-time attendant, Otis Full Collective Control elevators are equipped with the optional With Attendant feature. Lights on the control panel tell the attendant when there are passengers waiting at other floors. He controls the closing of the doors, the direction of travel, and can "express" his car when full. The elevator stores all calls and answers them automatically. When the attendant goes off duty, he turns a key-switch to convert the elevators to "self-service."

Write for booklets.

DUPLEX OPERATION

Otis "Duplex Collective Control" for two automatic elevators coordinates both cars for efficient service and prevents them from answering the same calls. It automatically assigns each call to the car that is in the best position to answer it promptly.

Otis Duplex Collective Control is interestingly described in booklets.

IN APARTMENT HOUSES

Full Collective Control elevators give tenants fast, consistent service at low cost. With the savings, some houses add a doorman, to give tenants more individual attention at no extra expense.

For houses up to six stories high with not more than 75 family units, one Full Collective Control elevator with a speed of 200 fpm is normally adequate. A 2000 lb. capacity car, large enough for furniture, is recommended. Most taller buildings need two elevators, with speeds of 400 fpm and up. A Duplex arrangement is recommended which permits both cars to carry passengers during busy hours and allows one car to be detached for part-time "service" duty. Removable wall pads can be furnished to protect the interior finish of the service car.
NOTE: Overtied equals distance from top floor to top of machine beam supports and varies with speed and local codes. Consult any Otis office.

<td>6'-8&quot;</td>
</tr>
</tbody>
</table>

This is general data. Your local Otis Representative will be happy to work with you on the preparation of working drawings.

The dimensions in this table meet CSA Code requirements. However, minimum pit depths or overhead heights may vary slightly with local codes.
The Otis Underslung Electric Elevator is a conventional, traction, counterweighted elevator which does not require a penthouse. Its hoisting apparatus, a standard Otis geared elevator machine, is mounted at the lower landing adjacent to the hoistway. The car is lifted from beneath by a special roping arrangement.

**OPERATION**

Single Automatic Push Button Operation utilizes one button at each landing and one floor button in the car for each landing served. It allows for full and uninterrupted use of the elevator until either UP or DOWN trip is completed.

Otis Full Collective Control, described on page 9, is also available for Underslung Electric Elevators.
Otis hospital elevators are designed to meet present-day hospital needs. The elevator car will easily carry a standard hospital bed or other bulky hospital equipment. Versatile automatic control systems permit economical "self-service" or attendant operation.

For even the small hospital, a minimum of two elevators is recommended, so that at least one will always be available for use. One elevator can be a service car, with a rear entrance opening into storage, utility, and service areas, and possibly onto an ambulance platform.

**HOSPITAL ELEVATOR FEATURES**

A car, with a platform 5'-8" by 8'-8", is recommended because it has ample room for easy movement of beds and other equipment. Speeds range from 75 fpm for the small 2-story hospital to over 600 fpm for the busy, multi-story buildings. Rubber-tired roller guides, sound isolated cars and rubber-tired car door hangers contribute to quiet operation. "Micro" Self-Leveling expedites safe transfer of beds, stretchers, x-ray apparatus, and other heavy equipment.

Write for booklet.

*Single Opening **Double Opening

This is general data. Your local Otis Representative will be happy to work with you on the preparation of working drawings.

Minimum pit depths are measured from lower landing floor to pit floor. Overhead heights are measured from upper landing floor to top of machine beam supports.

The dimensions in this table meet CSA Code requirements. However, minimum pit depths and overhead heights may vary slightly with the local code.
Otis residence elevators are designed for quiet, dependable service in the home at low cost. They have simple automatic push-button controls and serve up to 4 landings at 35 fpm with a maximum rise of 35'.

The elevator is compact and sturdy. Its car is underslung for low overhead and its single-wrap traction machine and controller are mounted on a foundation in the basement so no penthouse or overhead machine room is required. It can be installed without elaborate construction wherever hoistway space can be found: a tier of closets, a room corner, a stair tower or a shaft outside the building. The guide-rail structure can be self-supporting or can be fastened to the building framework.

Write for booklet.

### RECOMMENDED SIZES—RESIDENCE ELEVATORS

</table>

This is general data. Your local Otis Representative will be happy to work with you on the preparation of working drawings.

Other platform sizes can be supplied as space conditions permit from a minimum platform size of 2'-2 1/2'' width x 2'-7'' depth to a maximum of 3'-5'' width x 4'-4'' depth.

Hoistway door openings based on use of single-swing doors.

*This dimension contingent upon type of safety.
cars and entrances for passenger elevators

Car design in wood and natural metal. Illumination is from above thru plastic dome. Ventilation is by means of a plenum chamber and blower system. Two car operating panels, one on each side of entrance, make it easy for passengers to register their calls.
Selections can be made from a complete line of standard cars and entrances. In addition, Otis furnishes custom-built ornamental work: extruded panels, sculptured castings, decorative etched designs. To help the architect arrive at these special effects, Otis experts are ready to make special colored renderings. To help the architect decide on technical considerations, Otis designers are prepared to investigate lighting, ventilating and material requirements. These services are furnished free of charge without obligation.

**ELEVATOR CARS**

Included in the Otis "standard" line are sixteen designs for steel cars—fourteen applicable to a variety of buildings with two designed for hospital use—and nine additional designs for wood cars, each one recommended for a specific kind of building.

Steel cars are constructed of high-grade cold-rolled furniture steel... wood cars are constructed of 5 ply laminated plywood panels faced with carefully selected and matched hardwood veneers of African or Honduras Mahogany, American Walnut, Prima Vera, Cherry, Aspen or Oak.

**ELEVATOR ENTRANCES**

Otis elevator entrance designs are suitable for all the standard door arrangements—single-slide, two-speed, center-opening and single-swing.

Each entrance consists of flush hollow-metal doors, unit-type frame assembly, anti-slip sill, fascia plate or toe guard, header and structural support angles.

Doors and frame are constructed of heavy gauge metal and finished in baked-enamel. Natural metal finishes—nickel silver, yellow bronze, stainless steel—are available. Also available are door panels with stripping, monograms, or other special decorative effects.

Both cast and extruded sills are available. The extruded sills have the clean, orderly lines inherent in parts made by the extrusion process and they present a modern architectural appearance.

Color chips, finish samples and literature covering the entire line of Otis cars and entrances are available at your local Otis office.
... provides intensive service in department stores, transportation terminals, office and industrial buildings, sports arenas, garages, schools and exposition halls—wherever you want to move masses of people quickly from one level to another.

... furnishes convenient service in retail stores, banks, theatres, hotels, restaurants—wherever you want to induce people to travel freely from floor to floor.

... gives street-level accessibility to second floors... increases rental values in those upper-floor locations.

Escalators handle both circulating and massed passenger traffic easily and at low cost... lend added prestige... increase customer comfort and convenience.

**TWO STANDARD WIDTHS**

Otis offers a standardized moving stairway available in two efficient widths, 32-inches and 48-inches. At capacity, the escalator can handle far heavier traffic than the elevator. The 32" escalator traveling at 80 f.p.m. can carry about 5,000 passengers per hour while the 48" escalator can carry about 8,000 passengers per hour. Both the 32" and the 48" widths are available at 120 f.p.m. which further increases their handling capacity.

The 32-inch escalator is recommended for small stores, restaurants, banks, theatres and the upper floors of large stores.

The heavy duty 48-inch Otis escalator provides the intensive passenger-carrying service needed in large department stores, railroad stations and bus terminals.

**CONSTRUCTION FEATURES**

Otis Escalator features include a truss-enclosed machine, eliminating a costly machine room, and a three-section factory-fabricated truss, reducing installation costs. Other Otis-designed features are: full semi-circular extended newels, pinch-proof handrails, inaccessible handrail openings, replaceable comb teeth sections and narrow-gauge step treads with "safety" demarcation lines.

**LOCATION AND ARRANGEMENT**

Since the positioning of moving stairways involves many considerations, Otis planning engineers study individual traffic problems and assist in developing a suitable vertical transportation plan. The services of these experts is furnished free of charge and without obligation.

Write for layout and design booklet.

---

The four new 32-inch escalators in Republic National Bank, Dallas feature rigidized bronze interior panels which lend luxury and quality to this installation.

New York's Belmont Race track has two 48-inch escalators and four 32-inch units. The two 48-inch units are completely exposed to the elements and all electrical and mechanical parts of the equipment were especially treated to protect them from rain and dampness.

</tbody>
</table>

**NOTE:**

Support loads computed from the above formulae include weight of machine, live load and plaster on escalator, but not the weight of well railings or similar items.

Escalator loads should be considered uniformly distributed. Approximate allowance should be made for dynamic stresses due to moving loads which are approximately 35% of the total loads.

This is general data. Your local Otis Representative will be happy to work with you on the preparation of working drawings.

*Speeds up to 120 feet per minute are available.*
FREIGHT ELEVATORS FOR

- PLANTS
- WAREHOUSES
- STORES
- GARAGES
- HOSPITALS
- OTHER BUILDINGS
For a properly-engineered installation, the choice of a freight elevator requires consideration of such factors as size and weight of the materials to be transported and the method of handling. The building characteristics must also be considered. To insure an elevator installation suited to each set of operating conditions, Otis manufactures several basic types of freight elevators in a wide range of capacities and with a choice of automatic or manual control systems. Electric elevators which are not limited in car speeds and rise are customarily furnished. As a pioneer in the development and manufacture of hydraulic elevators, Otis, with a long experience in this field of engineering, also offers hydraulic freight elevators for applications to which they are suited.

**METHODS OF OPERATION**

Full Collective Control provides speedy, efficient, self-service operation. During busy periods, elevators may be attendant-operated if so desired. Also a switch can be provided for uninterrupted handling of special loads.

For low-rise installations with light traffic, Double Button Control permits anyone in the car or at any landing to operate the elevator by constant pressure on an UP or DOWN button.

**THE FREIGHT ELEVATOR'S BIG JOB**

Directly and indirectly, modern freight elevators can make for efficient operation throughout an entire building. The results of a properly-planned, productive freight elevator installation, show up in increased materials handling volume and greater earning power — increased productivity at lower costs. Whether you're planning a new building, installing an elevator in an existing plant, or modernizing an outmoded elevator, Otis is ready to assist you with your vertical transportation problem.

*Loading by hand truck. **Automobile loading includes passenger car and light trucks.

*This table is based on the use of electric power elevators. The capacities (in pounds) listed above can also be duplicated by Otis Plunger Electric equipment when limited rises make the application of hydraulic elevators a consideration.*
Otis Sidewalk Elevators travel at 25 feet per minute between the sidewalk level and one or two basement levels, for a maximum rise of 30 feet. Rated lifting capacity is 2500 pounds. A bow-iron at the top of the car opens the sidewalk covers as the elevator rises through the opening, and allows them to close as it descends to the basement.

The elevator is operated either by UP and DOWN buttons at each basement landing or sidewalk-level UP and DOWN key switches, and is arranged so that the car may only be operated in the area of the sidewalk doors from the key switches located above the sidewalk level.

Minimum pit depth, lower landing floor to pit floor—5'-4". This dimension may vary slightly with local codes.

Dimensions in table are based on the maximum sidewalk opening permitted by CSA code.
For Small Plants, Warehouses, Laundries, Stores and All Types of Buildings with Light Duty, Low-Rise Requirements.

Otis Light Duty freight elevators have a semi self-supporting framework that permits installation in new and most existing hoistways without reinforcing the building, without adding overhead supports, and without building a penthouse.

Serving two or three stories at low cost, the freight elevators travel at a speed of 25 feet per minute and can be used for any rise up to 35 feet. Standard Otis safety devices prevent overtravel at terminals and regulate the winding action of the drum-type machine. Otis Double Button Control is standard but automatic push-button control can be substituted. The rugged car is normally equipped with horizontal folding gates, but vertical lifting gates are available where headroom permits.

Write for booklet.

**SELF-SUPPORTING GUIDE RAILS**

carry hoist ropes, sheaves, elevator car and full pay load, and transfer heavy vertical loads to pit. Rails are attached to the building at each floor and at top of the hoistway and steadying member carries governor and dead-end hitch. Maximum steadying load on the hoistway is less than 800 lbs.

This is general data. Your local Otis Representative will be happy to work with you on the preparation of working drawings.
Otis General Purpose Freight elevators are designed for a wide variety of freight-handling needs. Ruggedly built and fully equipped with Otis safety features, General Purpose Freight elevators are available with Unit Multi-Voltage speed regulation, "Micro" Two-Way Self-Leveling, and a choice of Otis control systems for efficient self-service or attendant operation. Otis power-operated, vertical bi-parting, all-steel hoistway doors are recommended. Power operation is also recommended for car gates. In addition to their more usual applications in commercial and industrial buildings, Otis General Purpose Freight elevators also serve as automobile elevators, marine elevators, mine elevators, etc.

This is general data. Your local Otis Representative will be happy to work with you on the preparation of working drawings.  
Minimum pit depths are measured from bottom landing floor to pit floor.  
Minimum overhead heights are measured from top landing floor to top of machine beam supports.  
The dimensions in table meet CSA Code requirements. However, minimum pit depths and overhead heights may vary slightly with local codes.

Dimensions for larger sizes on request. Dimensions do not apply to machine room, which varies with type of installation and building conditions. Dimensions vary slightly if front and rear entrances are required.
FOR ALL HEAVY-DUTY FREIGHT INSTALLATIONS WHERE INDUSTRIAL TRUCKS MAY BE USED

With the growing emphasis on mechanization of materials handling, new industrial buildings are being designed and existing buildings are being modernized to accommodate industrial trucks. Otis Pow-R-Truck Freight elevators are designed and built to handle industrial-truck traffic efficiently.

Features of Otis Pow-R-Truck Freight elevators include: self-leveling to permit even small-wheeled vehicles to roll on and off easily; a choice of Otis control systems for operation by an attendant or other employees; “pendant” controls so that a power-truck driver can “call” the elevator without leaving his truck; and Otis power-operated hoistway doors and car gates (see pages 28 and 29) to conserve time and manpower. A special feature, “static loading”, is recommended where the elevator is required to support—and hold at a floor—the total contract load plus the weight of the lift truck during loading operations.

TAKING THE EXTRA STRESSES

The elevator installation must be able to withstand unusual stresses as well as heavier loads. Otis Pow-R-Truck elevators have extra-sturdy platforms, car-frames, guide rails, motors and brakes to take the vertical, horizontal and torsional stresses imposed by loading the elevator and running with an off-center load. Reinforcing columns are installed in the hoistway, by the owner as part of the building, to insure a rigid structure for support of the guide rails.

For a more complete treatment of problems encountered in power truck operation write for booklet.

</tbody>
</table>

*These dimensions do not include space for Column Rail Backing. If hoistway side walls are not adequate to withstand thrusts and torsional loads imparted through the car guide rails, double column backing must be furnished by owner.

**Hoistway—front to back—large enough to allow for the installation of a reverse or rear opening in the car.

The chart above contains general data. The local Otis representative will be happy to cooperate with you on the preparation of working drawings, and will provide pit and overhead dimensions to suit.
An oil hydraulic elevator for special low-rise, light and heavy duty freight handling requirements.

Otis Plunger Electric elevators require no special building alterations for their installation. The entire weight of the car and its load is supported entirely from below on a steel plunger, which keeps heavy loads off the building framework. The Otis Plunger Electric elevator is ideal for such installations where building alterations would be costly or impossible. It also provides low-cost installation where, in cases of new building construction, it would be impossible to obtain suitable space conditions and supports for any other type of freight elevator requiring a penthouse.

Otis Plunger Electric elevators can be especially constructed to withstand the “punishing” effects produced under even the severest power truck loading conditions. Such automatic freight loading devices create various off-balanced forces which tend to twist and tilt the entire elevator car and platform structure. With the Plunger Electric, such reactions to heavy impact and static loading forces are readily met and absorbed, before they can cause trouble, by the rugged design features built into the elevator itself . . . the same rugged elevator design features that Otis engineers have perfected over the years.

Economical speeds consistent with the travel and application of the elevator can be furnished. Car speeds should always be established on the basis of full contract load in the up direction to insure pumping equipment of adequate size.

Otis Plunger Electric Freight Elevators are available in a multiplicity of platform sizes and capacity combinations to suit any size hoistway. The capacities listed are for typical installations; higher capacities and larger platforms can be furnished on request. Dimensions do not apply to machine room which varies with type of installation and building conditions.
Otis bi-parting freight hoistway doors consist of two vertically-sliding sections that counterbalance each other. Otis-built throughout and available in sizes to fit all openings 4'0" wide by 6'0" high to 10'0" wide by 12'0" high, these doors feature:

1. Manual or power operation to meet all service needs.
2. All-steel replaceable panel construction for long life and additional fire protection.
3. Door suspension at center of gravity and rolled-steel guide rails for easy opening and closing.
4. Rugged truckable sills to transmit trucking loads to the building structure.
5. Complete safety protection at hoistway entrances.

Bi-parting hoistway doors are provided with 1" neoprene astragals which eliminate the possible shearing hazard in overlapping steel astragals and at the same time comply with all the requirements of the Board of Fire Underwriters. Manual doors, equipped with neoprene astragals, are also provided with a side latching device for greater safety.

**POWER OPERATION**

Power operation recommended because it permits speedy, effortless opening and closing of the doors at the touch of a button. Power-operated doors and gates facilitate rapid movement of freight, permit employment of handicapped or over-age elevator attendants, and are well suited to use in conjunction with industrial truck loading of elevators.

For power operation, each pair of hoistway-door sections and each car gate is equipped with a specially-designed electric operator. This operator is powered by a direct current, gear-in-head motor which drives the doors (or car gate) to the fully opened and fully closed positions. Inter-connected controls coordinate operation of doors and gate, and automatic slow-down switches insure full, firm and quiet opening and closing.

To speed service with self-leveling elevators, the hoistway doors and car gates are arranged to open automatically as the car levels to a landing. In other installations, the doors and gate are opened by the mere touch of a button as the car stops. In all cases, closing of the doors and gate is controlled by constant pressure on a “close” button.

*Write for booklet.*

**VERTICAL LIFTING CAR GATE**

Otis expanded metal, vertical lifting car gate is 20% lighter, yet stronger and more rigid than ordinary wire mesh gates of the same size. Heavy aircraft-type steel sections frame and brace the panel, which is made from one piece of sheet steel and pierced and expanded to form a diamond-shaped mesh. Openings will not pass a ball larger than 1½" diameter (CSA Code permits 2"). Strength also added by welding the panel into the steel frame and welding equally-spaced vertical braces to both panel and frame.
REGULAR AND PASS TYPE DOORS

FOR REGULAR TYPE DOORS: SPANDREL HEIGHT MUST EQUAL ½ OPENING HEIGHT* PLUS 8½".
FOR PASS TYPE DOORS: SPANDREL HEIGHT MUST BE AT LEAST 14½".
*Where opening heights vary above and below a spandrel, the larger of the two values must be used in determining the type of door to be installed at lower opening.

†Applies when all doors on the same side of a hoistway are of the regular type.
‡Applies when one or more doors on the same side of a hoistway are of the pass type. If a combination of regular and pass type doors is used on the same side of a hoistway, the regular type doors have wide sills.
This is general data. Your local Otis Representative will be happy to work with you on the preparation of working drawings.
Dimensions in this table apply with standard doors — openings not over 10'-0" wide and elevator duties not over 12000#.
Otis dumbwaiters are designed to handle from 100 to 500 lbs. at speeds from 45 ft.-per-minute upward.

Otis dumbwaiters are completely automatic. Choice of control system depends upon type of service required. For two-floor service, dumbwaiter is usually equipped with “Call and Send” system. Car can be called to or sent from either landing. For three or more floors, intensity of service determines the type of control: “Multi-Button” control for intermittent service; “Central Station Dispatching” for intensive dumbwaiter service.

Cars can be equipped to return automatically when unloaded, or signals can be installed to indicate where the car has stopped and when it is ready to be returned. For busy installations where two or more dumbwaiters operate together, “group” features are available for coordinating operation and insuring efficient “teamwork.”

**MACHINE-ABOVE ARRANGEMENT**

Built like a compact, miniature elevator, Otis-built machine and controller are mounted above the hoistway. Both traction type and drum type machines are available. However, drum type installations are limited to a rise of 30'-6". Guide rails are attached to the hoistway wall. Dumbwaiter can have door openings at front, rear or side if required.

**UNDER-COUNTER ARRANGEMENT**

The Otis-built drum type hoisting machine is located at the bottom of the hoistway, and the car has underslung sheaves. Controller can be located in any convenient space close to the hoistway. Guide rails are fastened to and supported by the building structure. Duty 300# @ 50 f.p.m.

*Write for booklet.*

DIRECTORY OF MANUFACTURERS AND MANUFACTURERS' REPRESENTATIVES

An alphabetically arranged list of Manufacturers and their Sales Representatives, with complete addresses of principal offices and branch offices where available.

In this Directory are listed the names of all manufacturers referred to throughout the Products Index, and also the names of companies and individuals acting as the sales representatives of these manufacturers, in Canada.

Under the manufacturers' names are included the locations of their Canadian Branch Offices; the names and locations of their sales representatives, and the names of other manufacturing companies for which they act as representatives.

Under the "Represented By", names are given the locations of their Canadian Branch Offices, the names of organizations acting as their representatives, and the names of the manufacturers represented.

In this manner the Directory provides a complete reference system from which to secure the addresses of principal and branch offices of manufacturers and their sales representatives.

This DIRECTORY includes the following classifications:—

Branch Offices: The location of these has been included where possible.

Represented By: Associated and Subsidiary Companies, as well as separate organizations acting in this capacity, are listed under this heading.

Representing: Firms for whom any particular organization acts as sales representative are listed under this heading.

The terms "Represented by" and "Representing" are used to indicate the association of companies and individuals for sales purposes only, without differentiating as to the exact relationship in each particular case.

Throughout the Directory, firms and individuals referred to as Represented by are listed whether their representation includes all or only certain of the products manufactured by their principals, and all of Canada or only a specific territory.

For Classified Index of Materials, Supplies and Services, see PRODUCTS INDEX Pages 191 and 301

190 THE ARCHITECTURAL AND BUILDING CATALOGUE - 1959-60
ARCHITECTURAL AND BUILDING

PRODUCTS INDEX

The Products Index is designed to meet the requirements of architects, consulting engineers, building contractors, purchasing agents, maintenance superintendents and others to whom such a comprehensive classified index is obviously invaluable.

The subject headings embrace a wide variety of products. Cross-references have been provided where products are equally well-known under two or more names and in other cases where it has been deemed advisable; the names of manufacturers being listed under one heading only.

BASIS OF INDEXING

The principle upon which this Index is compiled is to index the product under the main noun as the keyword. Thus, such equipment as Horizontal Return Tubular Boilers, Metal Ceilings, etc., will be found indexed as BOILERS, Return Tubular, Horizontal; CEILINGS, Metal.

For obvious reasons, exceptions to this principle have been made in indexing group classifications such as Accessories, Machines, Systems, etc., which are indexed under the word representing the function performed: i.e., Fire Escapes under FIRE and Anti-Freeze under ANTI-FREEZE.

BASIS OF LISTING

Listings under the subject headings in the Products Index are restricted to manufacturers insofar as is practicable.

Under the category of "manufacturers" are included firms controlling the manufacturing rights of products, as well as those who operate plants.

In the case of Canadian companies which are associated with, or subsidiaries of, companies in other countries, the names of the Canadian organizations only have been listed, except where certain products manufactured by the associated company are sold through other organizations in Canada.

In cases where Canadian companies are licensed to manufacture the products of companies in other countries the listing may be in the name of either the licensee or licensor.

For Classified Index of Construction Equipment Material, see PRODUCTS INDEX, page 258

DIRECTORY OF MANUFACTURERS

AND

MANUFACTURERS' REPRESENTATIVES

An alphabetically arranged list of Manufacturers and their Sales Representatives, with complete addresses of principal offices and branch offices where available.

In this Directory are listed the names of all manufacturers referred to throughout the Products Index, and also the names of companies and individuals acting as the sales representatives of these manufacturers, in Canada.

Under the manufacturers’ names are included the locations of their Canadian Branch Offices, the names and locations of their sales representatives, and the names of other manufacturing companies for which they act as representatives.

Under the “Represented by” names are given the locations of their Canadian Branch Offices; the names of organizations acting as their representatives, and the names of the manufacturers represented.

In this manner the Directory provides a complete reference system from which to secure the addresses of principal and branch offices of manufacturers and their sales representatives.

This DIRECTORY includes the following classifications:

Branch Offices: The location of these has been included where possible.

Represented By: Associated and Subsidiary Companies, as well as separate organizations acting in this capacity, are listed under this heading.

Representing: Firms for whom any particular organization acts as sales representative are listed under this heading.

The terms Represented by and Representing are used to indicate the association of companies and individuals for sales purposes only, without differentiating as to the exact relationship in each particular case.

Throughout the Directory, firms and individuals referred to as “Represented by” are listed whether their representation includes all or only certain of the products manufactured by their principals, and all of Canada or only a specific territory.

For Classified Index of Construction Equipment Material, see PRODUCTS INDEX page 301

CONSTRUCTION EQUIPMENT SECTION

PRODUCTS INDEX

This new section contains over 1,000 listings and has been designed to enable the General Contractor to pinpoint in a matter of moments the source for supplying equipment used in the Building and Construction Field.

BASIS OF INDEXING

The principle upon which this Index is compiled is to index the product under the main noun as the keyword. Thus, such equipment as Cement Batchers, Roller Bearings etc., will be found indexed as Batchers Cement: Bearings, Roller.

BASIS OF LISTING

Listings under the subject headings in the Products Index are restricted to manufacturers insofar as is practicable.

Under the category of "manufacturers" are included firms controlling the manufacturing rights of products, as well as those who operate plants.

In the case of Canadian companies which are associated with, or subsidiaries of, companies in other countries, the names of the Canadian organizations only have been listed, except where certain products manufactured by the associated company are sold through other organizations in Canada.

In cases where Canadian companies are licensed to manufacture the products of companies in other countries the listing may be in the name of either the licensee or licensor.

To find the full address and nearest branch or representative listed in this section turn to page 259 for the Construction Equipment Directory of manufacturers and representatives.

Products Index

Ryders: Aggregate: Asphalt plants for
Barber Greene Co.
Cummers & Son Co.
Simplicity system Co.
Standard Steel Corp.

Ryders: Portable unit
Tarrant Mfg. Co.

Ryders: Rotary
Canadian Allis Chalmers Ltd.
Standard Steel Corp.
Tarrant Mfg. Co.

Ryders: Sand and gravel
Barber Machinery Ltd.
Kennedy Van Saun Manufacturing & Engineering Corp.
Laidlaw, Drew & Co. Ltd.
Littleford Bros., Inc.
Phoenix Engineering Co. Ltd.
Pioneer Engineering Div., Poor & Co. Inc.
Tarrant Mfg. Co.
White Mfg. Co.

Umpers: Portable heater
Flexible tubing Corp.

Umpers: Tunnel ventilation
Flexible tubing Corp.

Umpers: Construction
Chaseside equipment Co. of Canada

Umpers: Mining
Chaseside equipment Co. of Canada
Jones Ltd.

Umps: Bottom
Athey Products Corp.
Euclid Div. General Motors Corp.

Umps: Rear
Athey Products Corp.
Dietrich Collins Equipment Ltd.
Euclid Div. General Motors Corp.
Fruhauf trailer Co. of Canada Ltd.
Paciic truck & trailer Ltd.
White & Taylor Ltd.

Umps: Side
Athey Products Corp.

Umps: Trailer
Galton All Steel Body Co.
Paciic truck & trailer Ltd.
Wilson Motor Bodies Ltd.

 Lust control systems
Complete machinery & equipment Co. Inc.
Foundation equipment Corp.
Kipp Kelly Ltd.
Ruemelin Mfg. Co.

Ynamometers
Clayton Mfg. Co.
Eastern scale works limited.

Artburring machines
Canadian Longyear Ltd.
F. W. D. Corp. Canada Ltd.
K. A. Moore tools Inc.
Mobile Drilling Inc.
Petersen Engineering Co. Inc.
Wyoming valley equipment Div.

Artbrowning equipment
Gledhill road machinery Co.
International Harvester Co. of Canada Ltd.

Letourneau Inc.
R. & G.
Sicard Inc.
Wagner tractor Inc.
Wheel & rim Co. of Canada Ltd.

Edges:
Cutting: Graders, Dozers, Scrapers, Loaders
Snow plows, Maintainers, Drags etc.
Bucyrus Blades Inc.
Colorado fuel & iron Corp.
Consolidated pool supply Ltd.
Paper clamosen & Co.
Richardson-Fenwick road equipment Ltd.
Smunk manufacturing Co.

Edges:
Cutting
Letourneau Westinghouse Co.

Edges:
Straight
Cleveland formgrader Co.
Lite weight tool & Mfg. Co.

Elbows
Aerogrip Canada Ltd.

Electric sets: Diesel
Bingham equipment Co. Ltd.
Canadian Lister blackstone Ltd.
Consolidated engines & machinery Co. Ltd.
Crothers Geo. M. Ltd.
Gnaa, Davis & Sons Inc.
Orenda industrial Ltd.
Rock drill rod Co. Ltd.

Electrodes and accessories
Lincoln electric Co. of Canada Ltd.
Liquid carbonic Canadian Corp. Ltd.

Electrodes: Hard surfacing
Diamond hard Co.
Lincoln electric Co. of Canada Ltd.
Stoody Co.

Elevating plants: concrete
A. C. E. machinery Ltd.

Elevators
Baughman Mfg. Co. Inc.
Baxter Ltd.
Construction machinery Co. of Canada Ltd.
Diamond iron works Div.
Goodman Mfg. Co.
Erie strayer Co.
Fairfield engineering Co.
Ford Ltd.
Gruendler crusher & pulverizer Co.
Jeffrey Mfg. Co. Ltd.
Koehring waterous Ltd.
Marsden Ltd.
M. H.
Noble Co.
Parker Ltd.
Frederick.

Elevators: Bucket
Link belt Ltd.
Marsh engineering Co.
Wettlaufer equipment Ltd.

Elevators: Bucket: aluminum
Atlas conveyor Co.
Butler bin Co.
Kipp Kelly Ltd.
Vesuvius Co. Ltd.
S.

Elevators: Material
Allied agencies Limited
Armstrong Saas Ltd.
Bonded scale & machine Co.
Concrete transport mixer Co.
Fleming Mfg. Co.

Emulsifiers: Clay, Grout
Almar specialty machines Ltd.

Enamels: Chateau paint works Inc.
Dundurn Co. of Canada Ltd.

Enamels: Pipe line
Allied chemical Canada brunner mond prods. Ltd.

### Structural Steel Work
- Ardelt Industries of Canada Ltd.
- Dominion Bridge Co. Ltd.
- Dominion Wire Rope Ltd.
- Hepburn Ltd.

### Structures
- Aluminium
- Cobra Industries Inc.

### Substructures
- Pull
- Detachable

### Supplies
- Core Drill
- Driveway Co. Inc.

### Subsolers
- Blaw-Knox Co.
- Rame Plow Co. & Co. Ltd.

### Supplies, Truck
- Firestone Tire & Rubber Co. of Canada Ltd.

### Surfacers
- Concrete
- Concrete Surfacing Machinery Co.

### Surfacing Instruments
- Hilger & Watts Ltd.
- Hughes Owens Co. Ltd.
- White Co. David

### Sweepers
- Industrial Power
- Wayne Manufacturing Co.

### Sweepers, Street, Motorized Pick Up
- Austin Western Hemisphere Co.
- Crotthers Mfg. Ltd.
- Elgin Corp.
- Grace Manufacturing Co.
- Lull Engineering Co.
- Municipal Supply Co.
- Phoenix Engineering Co. Ltd.
- Roots Motor Canada Ltd.
- Sawyer Massey Div.
- Ford Smith Machine Co. Ltd.
- Sicard Inc.
- Tarrant Mfg. Co.
- Universal Equipment Co. Ltd.
- Wayne Crotthers Ltd.
- Wayne Manufacturing Co.

### Sweepers, Street Self Propelled
- Elgin Corp.
- Grace Manufacturing Co.
- Little Giant Prods. Inc.
- Lull Engineering Co.
- Municipal Supply Co.
- Phoenix Engineering Co. Ltd.
- Sawyer Massey Div.
- Ford Smith Machine Co. Ltd.
- Tarrant Mfg. Co.
- Wayne Crotthers Ltd.

### Switches, Rubber Tired Car
- Letourneau Westinghouse Co.

### Switchgear
- Canadian Allis Chalmers Ltd.
- Federal Pacific Electric of Canada

### Trees, Flexible Ball
- Barco Mfg. Co.
- Stratoflex of Canada Inc.

### Tarles, Vibrating
- Allam & Co. Ltd.
- Ex-P.
- Trainco Ltd.
- Wettlaufer Equipment Ltd.

### Taglines
- Morin Mfg. Co.
- McCaffrey Ruddock Tagline Corp.

### Tailgates
- Hydraulic
- Dealers Truck Equipment Co.
- Diesel Equipment Ltd.
- Galion Allsteel Body Co.
- Heil Co.
- Hercules Steel Products Co.
- Perfection Steel Body Co.
- Ramp Body & Fender Works

### Takeoffs
- Power
- American Coleman of Canada Limited
- Arrow Gear Co.
- Braden Winch Co.
- Davey Compressor Co.
- Dealers Truck Equipment Co.
- Ramp Body & Fender Works
- Scotia Equipment Ltd.
- Twin Disc Clutch Co.

### Tamplers
- Cleveland Trencher Co.
- Kelley Machine Div.
- Wiesner Rapp Co. Inc.
- Ottawa Steel Div.
- Young Spring & Wire Corp.
- Rock Drill Rod Co. Ltd.
- Taylor Co.
- Edward F.
- Thor Power Tool Co.
- Vibro Co.
- Vibro Plus Products Inc.
- Wettlaufer Equipment Ltd.

### Tamper
- Gasoline
- Operated
- Delmag Machinesfabrik Reinhold Dornfeld
- Master Vibrator Co.

### Tamper, Pneumatic
- Cleco Pneumatic Tool Co. of Canada Ltd.
- R.
- P.
- B Corporation
- Thor Power Tool Company

### Tapping Machines
- Vibratory
- Barco Mfg. Co.
- Jackson Vibrators Inc.
- Jay Co.
- Div.
- Leukart Mach. Co. Inc.
- Wettlaufer Equipment Ltd.

### Tank & Car Heaters and Boosters
- Combination
- Canadian Chromalox Co. Ltd.
- Hy May Machinery Co. Inc.

### Tanks
- Fruehauf Trailer Co. of Canada Ltd.
- Hy May Machinery Co. Inc.
- Oakwood Iron Works Ltd.
- Southwest Welding & Mfg. Co.
- Standard Steel Works Inc.
- St. Geman R.
- Westeel Products Ltd.

### Tanks, Fuel
- Gardner Trailers Ltd.
- Snyder Tank Corp.

### Tanks, Steel
- Provincial Engineering Ltd.
- Snyder Tank Corp.

### Tanks, Storage Portable
- Fairfield Engineering Co.
- Grace Manufacturing Co.
- Littleford Bros. Inc.
- Pettitfield Wood Mfg. Co.
- Simplicity System Co.
- Westeel Products Ltd.
